CHAPTER 5  Triangles and Congruence

Foldables Study Organizer

Make this Foldable to help you organize information about the material in this chapter. Begin with a sheet of plain 8 1/2" by 11" paper.

1. **Fold** in half lengthwise.

2. **Fold** the top to the bottom.

3. **Open** and cut along the second fold to make two tabs.

4. **Label** each tab as shown.

Reading and Writing  As you read and study the chapter, write what you learn about the two methods of classifying triangles.
Chapter 5  Problem-Solving Workshop

Project

Your school is sponsoring a Geometry and the Arts week and is awarding a prize for the best design. The only guideline is that the design must be composed of triangles. Make a design that is composed of triangles.

Working on the Project

Work with a partner and develop a plan. Here are some suggestions to help you get started.

- Research the works of Dutch artist M. C. Escher.
- Research how repeating patterns of triangles are used in Islamic art and architecture. You may also want to do research about geometric patterns that are common to your ethnic heritage.

Technology Tools

- Use an electronic encyclopedia to do your research.
- Use The Geometer’s Sketchpad or other drawing software to complete your design.

Research  For more information about M. C. Escher, visit:
www.geomconcepts.com

Presenting the Project

Draw your design on unlined paper. Write a paragraph that contains the following information about your design:

- classification of the triangles by their angles and sides,
- an explanation of how slides, flips, or turns are used, and
- some examples of congruent triangles.

Strategies

Look for a pattern.
Draw a diagram.
Make a table.
Work backward.
Use an equation.
Make a graph.
Guess and check.
Optical art is a form of abstract art that creates special effects by using geometric patterns. The design at the right looks like a spiral staircase, but it is made mostly of triangles.

In geometry, a **triangle** is a figure formed when three noncollinear points are connected by segments. Each pair of segments forms an angle of the triangle. The **vertex** of each angle is a vertex of the triangle.

Triangles are named by the letters at their vertices. Triangle $\triangle DEF$, written $\triangle DEF$, is shown below.

In Chapter 3, you classified angles as acute, obtuse, or right. Triangles can also be classified by their angles. All triangles have at least two acute angles. The third angle is either acute, obtuse, or right.
Triangles can also be classified by their sides.

<table>
<thead>
<tr>
<th>Triangles Classified by Sides</th>
<th>scalene</th>
<th>isosceles</th>
<th>equilateral</th>
</tr>
</thead>
<tbody>
<tr>
<td>no sides congruent</td>
<td>at least two sides congruent</td>
<td>all sides congruent</td>
<td></td>
</tr>
</tbody>
</table>

Since all sides of an equilateral triangle are congruent, then at least two of its sides are congruent. So, all equilateral triangles are also isosceles triangles.

Some parts of isosceles triangles have special names.

- The angle formed by the congruent sides is called the **vertex angle**.
- The congruent sides are called **legs**.
- The side opposite the vertex angle is called the **base**.
- The two angles formed by the base and one of the congruent sides are called **base angles**.

### Examples

Classify each triangle by its angles and by its sides.

1. \( \triangle EFG \) is a right isosceles triangle.
2. \( \triangle ABC \) is an acute equilateral triangle.

### Your Turn

a. \( \triangle XYZ \)
   - \( \angle X = 25^\circ \)
   - \( \angle Z = 122^\circ \)
   - \( \angle Y = 33^\circ \)

b. \( \triangle LNM \)
   - \( \angle L = 40^\circ \)
   - \( \angle M = 50^\circ \)
Find the measures of $\overline{AB}$ and $\overline{BC}$ of isosceles triangle $ABC$ if $\angle A$ is the vertex angle.

**Explore** You know that $\angle A$ is the vertex angle. Therefore, $\overline{AB} \cong \overline{AC}$.

**Plan** Since $\overline{AB} \cong \overline{AC}$, $AB = AC$. You can write and solve an equation.

**Solve**

\[
\begin{align*}
AB &= AC \\
5x - 7 &= 23 \\
5x - 7 + 7 &= 23 + 7 & \text{Substitution} \\
5x &= 30 \\
\frac{5x}{5} &= \frac{30}{5} & \text{Divide each side by 5.} \\
x &= 6
\end{align*}
\]

To find the measures of $\overline{AB}$ and $\overline{AC}$, replace $x$ with 6 in the expression for each measure.

\[
\begin{align*}
AB &= 5x - 7 \\
&= 5(6) - 7 \\
&= 30 - 7 \text{ or } 23
\end{align*}
\]

\[
\begin{align*}
BC &= 3x - 5 \\
&= 3(6) - 5 \\
&= 18 \text{ or } 13
\end{align*}
\]

Therefore, $AB = 23$ and $BC = 13$.

**Examine** Since $AB = 23$ and $AC = 23$, the triangle is isosceles.

---

**Check for Understanding**

**Communicating Mathematics**

1. Draw a scalene triangle.
2. Sketch and label an isosceles triangle in which the vertex angle is $\angle X$ and the base is $\overline{YZ}$.
3. Is an equilateral triangle also an isosceles triangle? Explain why or why not.

**Guided Practice**

Classify each triangle by its angles and by its sides. (Examples 1 & 2)

4. \[\triangle \text{ with angles } 30^\circ, 105^\circ, 45^\circ, \text{ sides } 5.5 \text{ cm, } 10.6 \text{ cm, } 6.5 \text{ cm}\]

5. \[\triangle \text{ with angles } 60^\circ, 60^\circ, 60^\circ, \text{ sides } 8 \text{ ft, } 8 \text{ ft, } 8 \text{ ft}\]

6. \[\triangle \text{ with angles } 45^\circ, 45^\circ, 90^\circ, \text{ sides } 4 \text{ ft, } 4 \text{ ft, } 5 \text{ ft}\]

7. Algebra \(\triangle ABC\) is an isosceles triangle with base $\overline{BC}$. Find $AB$ and $BC$. (Example 3)
Exercises

Practice

Classify each triangle by its angles and by its sides.

8. 9. 10.

14. 15. 16.

17. Triangle XYZ has angles that measure 30°, 60°, and 90°. Classify the triangle by its angles.

Make a sketch of each triangle. If it is not possible to sketch the figure, write not possible.

18. acute isosceles
19. right equilateral
20. obtuse and not isosceles
21. right and not scalene
22. obtuse equilateral

Applications and Problem Solving

Architecture  Refer to the photo at the right. Classify each triangle by its angles and by its sides.

a. \( \triangle ABC \)
b. \( \triangle ACD \)
c. \( \triangle BCD \)

Art  Refer to the optical art design on page 188. Classify the triangles by their angles and by their sides.

Data Update  For the latest information about optical art, visit: www.geomconcepts.com
25. **Quilting** Classify the triangles that are used in the quilt blocks.

![ Ohio Star](image1)

![ Duck's Foot in the Mud](image2)

26. **Algebra** \( \triangle DEF \) is an equilateral triangle in which \( ED = x + 5 \), \( DF = 3x - 3 \), and \( EF = 2x + 1 \).

   a. Draw and label \( \triangle DEF \).
   
   b. Find the measure of each side.

27. **Algebra** Find the measure of each side of isosceles triangle \( ABC \) if \( \angle A \) is the vertex angle and the perimeter of the triangle is 20 meters.

28. **Critical Thinking** Numbers that can be represented by a triangular arrangement of dots are called **triangular numbers**. The first four triangular numbers are 1, 3, 6, and 10.

   Find the next two triangular numbers.

**Mixed Review**

Write an equation in slope-intercept form of the line with the given slope that passes through the given point. (Lesson 4–6)

29. \( m = -3, (0, 4) \)

30. \( m = 0, (0, -2) \)

31. \( m = -2, (-2, 1) \)

Find the slope of the lines passing through each pair of points. (Lesson 4–5)

32. \( (5, 7), (4, 5) \)

33. \( (8, 4), (-2, 4) \)

34. \( (5, -2), (5, 1) \)

35. **Sports** In the Olympic ski-jumping competition, the skier tries to make the angle between his body and the front of his skis as small as possible. If a skier is aligned so that the front of his skis makes a \( 20^\circ \) angle with his body, what angle is formed by the tail of the skis and his body? (Lesson 3–5)

36. **Multiple Choice** Use the number line to find \( DA \). (Lesson 2–1)

   - A \( -10 \)
   - B \( -6 \)
   - C \( 6 \)
   - D \( 10 \)
If you measure and add the angles in any triangle, you will find that the sum of the angles have a special relationship. Cut and fold a triangle as shown below. Make a conjecture about the sum of the angle measures of a triangle.

You can use a graphing calculator to verify your conjecture.

**Graphing Calculator Exploration**

**Step 1** Use the Triangle tool on the [F3] menu. Move the pencil cursor to each location where you want a vertex and press [ENTER]. The calculator automatically draws the sides. Label the vertices A, B, and C.

**Step 2** Use the Angle tool on the [F6] menu to measure each angle.

**Try These**
1. Determine the sum of the measures of the angles of your triangle.
2. Drag any vertex to a different location, measure each angle, and find the sum of the measures.
3. Repeat Exercise 2 several times.
4. Make a conjecture about the sum of the angle measures of any triangle.

The results of the activities above can be stated in the Angle Sum Theorem.

<table>
<thead>
<tr>
<th>Theorem 5–1 Angle Sum Theorem</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Words:</strong> The sum of the measures of the angles of a triangle is 180.</td>
</tr>
<tr>
<td><strong>Model:</strong></td>
</tr>
<tr>
<td><strong>Symbols:</strong> $x + y + z = 180$</td>
</tr>
</tbody>
</table>
You can use the Angle Sum Theorem to find missing measures in triangles.

1. **Find \( m\angle T \) in \( \triangle RST \).**

   \[
   m\angle R + m\angle S + m\angle T = 180
   \]

   \[
   54 + 67 + m\angle T = 180
   \]

   \[
   121 + m\angle T = 180
   \]

   \[
   121 - 121 + m\angle T = 180 - 121 \quad \text{Subtract 121 from each side.}
   \]

   \[
   m\angle T = 59
   \]

2. **Find the value of each variable in \( \triangle DCE \).**

   \( \angle ACB \) and \( \angle DCE \) are vertical angles.

   Vertical angles are congruent, so \( m\angle ACB = m\angle DCE \). Therefore, \( x = 85 \).

   Now find the value of \( y \).

   \[
   m\angle D + m\angle DCE + m\angle E = 180
   \]

   \[
   55 + 85 + y = 180
   \]

   \[
   140 + y = 180
   \]

   \[
   140 - 140 + y = 180 - 140 \quad \text{Subtract 140 from each side.}
   \]

   \[
   y = 40
   \]

   Therefore, \( x = 85 \) and \( y = 40 \).

**Your Turn**

a. Find \( m\angle L \) in \( \triangle MNL \) if \( m\angle M = 25 \) and \( m\angle N = 25 \).

b. Find the value of each variable in the figure at the right.

You can use the Angle Sum Theorem to discover a relationship between the acute angles of a right triangle. In \( \triangle RST \), \( \angle R \) is a right angle.

\[
90 + m\angle T + m\angle S = 180
\]

\[
90 - 90 + m\angle T + m\angle S = 180 - 90 \quad \text{Subtract 90 from each side.}
\]

\[
 m\angle T + m\angle S = 90
\]

By the definition of complementary angles, \( \angle T \) and \( \angle S \) are complementary. This relationship is stated in the following theorem.
Lesson 5–2
Angles of a Triangle

Example
Algebra Link

3

Find \( m \angle A \) and \( m \angle B \) in right triangle \( ABC \).

\[
\begin{align*}
m \angle A + m \angle B &= 90 & \text{Theorem 5–2} \\
2x + 3x &= 90 & \text{Substitution} \\
5x &= 90 & \text{Combine like terms.} \\
x &= 18 & \text{Divide each side by 5.}
\end{align*}
\]

Now replace \( x \) with 18 in the expression for each angle.

\[
\begin{align*}
\angle A &= 2x \\
&= 2(18) \text{ or } 36
\end{align*}
\]

\[
\begin{align*}
\angle B &= 3x \\
&= 3(18) \text{ or } 54
\end{align*}
\]

An equiangular triangle is a triangle in which all three angles are congruent. You can use the Angle Sum Theorem to find the measure of each angle in an equiangular triangle.

Triangle \( PQR \) is an equiangular triangle. Since \( m \angle P = m \angle Q = m \angle R \), the measure of each angle of \( \triangle PQR \) is \( 180 \div 3 \) or 60.

This relationship is stated in Theorem 5–3.
Check for Understanding

Communicating Mathematics

1. Choose the numbers that are not measures of the three angles of a triangle.
   a. 10, 20, 150
   b. 30, 60, 90
   c. 40, 70, 80
   d. 45, 55, 80

2. Explain how to find the measure of the third angle of a triangle if you know the measures of the other two angles.

3. Is it possible to have two obtuse angles in a triangle? Write a few sentences explaining why or why not.

Guided Practice

Find the value of each variable.  (Examples 1 & 2)

4. 5. 6.

7. Algebra The measures of the angles of a triangle are $2x$, $3x$, and $4x$. Find the measure of each angle. (Example 3)

Exercises

Find the value of each variable.

8. 9. 10.

14. 15. 16.
Find the measure of each angle in each triangle.

17. \(75°\) \((x + 20)°\) \(50°\)

18. \(2x°\) \(x°\)

19. \(63°\) \((x + 15)°\) \(x°\)

20. The measure of one acute angle of a right triangle is 25. Find the measure of the other acute angle.

21. **Construction** The roof lines of many buildings are shaped like the legs of an isosceles triangle. Find the measure of the vertex angle of the isosceles triangle shown at the right.

22. **Algebra** The measures of the angles of a triangle are \(x + 5\), \(3x + 14\), and \(x + 11\). Find the measure of each angle.

23. **Critical Thinking** If two angles of one triangle are congruent to two angles of another triangle, what is the relationship between the third angles of the triangles? Explain your reasoning.

24. The perimeter of \(\triangle GHI\) is 21 units. Find \(GH\) and \(GI\). *(Lesson 5–1)*

25. State the slope of the lines perpendicular to the graph of \(y = 3x - 2\). *(Lesson 4–6)*

Identify each pair of angles as alternate interior, alternate exterior, consecutive interior, or vertical. *(Lesson 4–2)*

26. \(\angle 1, \angle 5\)

27. \(\angle 9, \angle 11\)

28. \(\angle 2, \angle 3\)

29. \(\angle 7, \angle 15\)

30. **Short Response** Points \(X\), \(Y\), and \(Z\) are collinear, and \(XY = 45\), \(YZ = 23\), and \(XZ = 22\). Locate the points on a number line. *(Lesson 2–2)*
We live in a world of motion. Geometry helps us define and describe that motion. In geometry, there are three fundamental types of motion: **translation**, **reflection**, and **rotation**.

In a **translation**, you slide a figure from one position to another without turning it. Translations are sometimes called *slides*.

In a **reflection**, you flip a figure over a line. The new figure is a mirror image. Reflections are sometimes called *flips*.

In a **rotation**, you turn the figure around a fixed point. Rotations are sometimes called *turns*.

When a figure is translated, reflected, or rotated, the lengths of the sides of the figure do not change.

### Examples

Identify each motion as a **translation**, **reflection**, or **rotation**.

1. **Translation**
2. **Reflection**
3. **Rotation**

### Your Turn

- a. 
- b. 
- c.
The figure below shows a translation.

Each point on the preimage can be paired with exactly one point on its image, and each point on the image can be paired with exactly one point on the preimage. This one-to-one correspondence is an example of a mapping.

The symbol $\rightarrow$ is used to indicate a mapping. In the figure, $\triangle ABC \rightarrow \triangle DEF$. In naming the triangles, the order of the vertices indicates the corresponding points.

<table>
<thead>
<tr>
<th>Preimage</th>
<th>Image</th>
</tr>
</thead>
<tbody>
<tr>
<td>$A$</td>
<td>$D$</td>
</tr>
<tr>
<td>$B$</td>
<td>$E$</td>
</tr>
<tr>
<td>$C$</td>
<td>$F$</td>
</tr>
</tbody>
</table>

This mapping is called a transformation.

In the figure, $\triangle XYZ \rightarrow \triangle ABC$ by a reflection.

**Name the image of $\angle X$.**

$$\triangle XYZ \rightarrow \triangle ABC$$

$\angle X$ corresponds to $\angle A$.

So, $\angle A$ is the image of $\angle X$.

**Name the side that corresponds to $\overline{AB}$.**

Point $A$ corresponds to point $X$.

$$\triangle XYZ \rightarrow \triangle ABC$$

Point $B$ corresponds to point $Y$.

So, $\overline{AB}$ corresponds to $\overline{XY}$.
Translations, reflections, and rotations are all isometries. An isometry is a movement that does not change the size or shape of the figure being moved. Artists often use isometries in designs. One of the most famous artists to use this technique was M. C. Escher.

Identify the type of transformation in the artwork at the right.

Each figure can be moved to match another without turning or flipping. Therefore, the motion is a translation.

M. C. Escher, Pegasus

Check for Understanding

Communicating Mathematics

1. Explain the difference between a translation and a rotation.

2. Suppose \( \triangle ABC \rightarrow \triangle RST \). Antonio says that \( \angle C \) corresponds to \( \angle T \). Keisha says she needs to see the drawing to know which angles correspond. Who is correct? Explain your reasoning.

Guided Practice

Identify each motion as a translation, reflection, or rotation. (Examples 1–3)

3. 

4. 

5.

In the figure at the right, \( \triangle XYZ \rightarrow \triangle RST \). (Examples 4 & 5)

6. Name the image of \( XY \).

7. Name the angle that corresponds to \( \angle R \).

8. Native American Designs The design below was found on food bowls that were discovered in the ruins of an ancient Hopi pueblo. Identify the transformations in the design. (Example 6)
Practice

Identify each motion as a translation, reflection, or rotation.

9. 
10. 
11. 

12. 
13. 
14. 

15. 
16. 
17. 

In the figure at the right, \( \triangle MNP \rightarrow \triangle FGH \).

18. Which angle corresponds to \( \angle N \)?
19. Which side corresponds to \( \overline{MN} \)?
20. Name the angle that corresponds to \( \angle H \).
21. Name the image of point \( Q \).
22. Name the side that corresponds to \( \overline{GH} \).
23. Name the image of \( PQ \).
24. If \( \triangle ABC \rightarrow \triangle PQR \), which angle corresponds to \( \angle R \)?

Applications and Problem Solving

25. Engines  Cams are important parts of engines because they change motion from one direction to another. As the cam turns around, the pistons move up and down. Identify the transformation that occurs in the cams.
26. **Art** The figure at the left shows an untitled work by M. C. Escher. Identify the type of transformation used to complete the work.

27. **Critical Thinking** The transformation below is called a **glide reflection**. How is this transformation different from a translation, reflection, and rotation?

![Glide Reflection](image)

28. The measure of one acute angle of a right triangle is 30. Find the measure of the other acute angle. *(Lesson 5–2)*

29. **Algebra** \( \triangle XYZ \) is an equilateral triangle in which \( XY = 2x + 2 \), \( YZ = x + 7 \), and \( XZ = 4x - 8 \). Find the measure of each side. *(Lesson 5–1)*

30. **Draw a figure for each pair of planes or segments.** *(Lesson 4–1)*
   - Parallel planes
   - Skew segments
   - Intersecting planes

33. **Multiple Choice** Which ordered pair represents the intersection of line \( t \) and line \( m \)? *(Lesson 2–4)*
   - A \((2, 3)\)
   - B \((-2, -3)\)
   - C \((2, -3)\)
   - D \((-2, 3)\)

---

**Quiz 1**

**Lessons 5–1 through 5–3**

**Classify each triangle by its angles and by its sides.** *(Lesson 5–1)*

1.

2.

3.

4. **Algebra** The measures of the angles of a triangle are \(2x\), \(5x\), and \(5x\). Find the measure of each angle. *(Lesson 5–2)*

5. Identify the motion as a **translation**, **reflection**, or **rotation**. *(Lesson 5–3)*
You’ve learned that congruent segments have the same length and congruent angles have the same degree measure. In the following activity, you will learn about congruent triangles.

**Materials:**
- grid paper
- scissors
- straightedge

**Step 1**
On a piece of grid paper, draw two triangles like the ones below. Label the vertices as shown.

```
A

B

D

C
```

**Step 2**
Cut out the triangles. Put one triangle over the other so that the parts with the same measures match up.

**Try These**
1. Identify all of the pairs of angles and sides that match or correspond.
2. Triangle $ABC$ is congruent to $\triangle FDE$. What is true about their corresponding sides and angles?

If a triangle can be translated, rotated, or reflected onto another triangle so that all of the vertices correspond, the triangles are **congruent triangles**. The parts of congruent triangles that “match” are called **corresponding parts**.

In the figure, $\triangle ABC \cong \triangle FDE$. As in a mapping, the order of the vertices indicates the corresponding parts.

<table>
<thead>
<tr>
<th>Congruent Angles</th>
<th>Congruent Sides</th>
</tr>
</thead>
<tbody>
<tr>
<td>$\angle A \cong \angle F$</td>
<td>$AB \cong FD$</td>
</tr>
<tr>
<td>$\angle B \cong \angle D$</td>
<td>$BC \cong DE$</td>
</tr>
<tr>
<td>$\angle C \cong \angle E$</td>
<td>$AC \cong FE$</td>
</tr>
</tbody>
</table>

These relationships help to define congruent triangles.
CPCTC is an abbreviation for Corresponding Parts of Congruent Triangles are Congruent.

**Definition of Congruent Triangles (CPCTC)**

If the corresponding parts of two triangles are congruent, then the two triangles are congruent.

If two triangles are congruent, then the corresponding parts of the two triangles are congruent.

### Examples

1. If \( \triangle PQR \cong \triangle MLN \), name the congruent angles and sides. Then draw the triangles, using arcs and slash marks to show the congruent angles and sides.

   First, name the three pairs of congruent angles by looking at the order of the vertices in the statement \( \triangle PQR \cong \triangle MLN \).

   So, \( \angle P \cong \angle M \), \( \angle Q \cong \angle L \), and \( \angle R \cong \angle N \).

   Since \( P \) corresponds to \( M \), and \( Q \) corresponds to \( L \), \( \overline{PQ} \cong \overline{ML} \).

   Since \( Q \) corresponds to \( L \), and \( R \) corresponds to \( N \), \( \overline{QR} \cong \overline{LN} \).

   Since \( P \) corresponds to \( M \), and \( R \) corresponds to \( N \), \( \overline{PR} \cong \overline{MN} \).

2. The corresponding parts of two congruent triangles are marked on the figure. Write a congruence statement for the two triangles.

   List the congruent angles and sides.

   \[
   \angle I \cong \angle K \\
   \angle G \cong \angle J \\
   \angle GHI \cong \angle JHK
   \]

   The congruence statement can be written by matching the vertices of the congruent angles. Therefore, \( \triangle IGH \cong \triangle KJH \).

### Your Turn

The corresponding parts of two congruent triangles are marked on the figure. Write a congruence statement for the two triangles.
Example 3

Algebra Link

\( \triangle RST \) is congruent to \( \triangle XYZ \). Find the value of \( n \).

Since \( \triangle RST \cong \triangle XYZ \), the corresponding parts are congruent.

\[
\begin{align*}
\text{Substitution} & \\
50 &= 2n + 10 \\
50 - 10 &= 2n + 10 - 10 \\
40 &= 2n \\
\frac{40}{2} &= \frac{2n}{2} \\
20 &= n
\end{align*}
\]

Check for Understanding

1. **Explain** what it means when one triangle is congruent to another.
2. **Describe** how transformations are used to determine whether triangles are congruent.

Guided Practice

*Getting Ready*

If \( \triangle ABC \cong \triangle DEF \), name the corresponding side or angle.

Sample: \( \angle B \)  
Solution: \( \angle B \) corresponds to \( \angle E \).

3. \( \angle F \)  
4. \( \angle A \)  
5. \( \overline{AC} \)  
6. \( \overline{EF} \)

7. If \( \triangle XYZ \cong \triangle EDF \), name the congruent angles and sides. Then draw the triangles, using arcs and slash marks to show the congruent angles and sides. *(Example 1)*

Complete each congruence statement. *(Example 2)*

8. \( \triangle ABC \cong \triangle ____ \)?

9. \( \triangle CBA \cong \triangle ____ \)?
10. Algebra $\triangle RQP$ is congruent to $\triangle ONM$. Find the value of $x$.

(Example 3)

$\triangle RQP \cong \triangle ONM$

11. $\triangle RQS \cong \triangle TUV$

12. $\triangle ACB \cong \triangle EFD$

Complete each congruence statement.

13. $\triangle BAD \cong \triangle \ ?$

14. $\triangle BCD \cong \triangle \ ?$

15. $\triangle AEB \cong \triangle \ ?$

16. $\triangle \ ? \cong \triangle DFE$

17. $\triangle RTS \cong \triangle \ ?$

18. $\triangle AED \cong \triangle \ ?$
If $\triangle BCA \cong \triangle GFH$, name the part that is congruent to each angle or segment.

19. $\angle F$  
20. $\overline{BA}$  
21. $\angle A$  
22. $\overline{FG}$  
23. $\angle G$

24. If $\triangle PRQ \cong \triangle YXZ$, $m\angle P = 63$, and $m\angle Q = 57$, find $m\angle X$.

25. **Algebra**  If $\triangle DEF \cong \triangle HEG$, what is the value of $x$?

26. **Landscaping**  Two triangular gardens have the same size and shape. The landscaper needed 24 feet of fencing for one garden. How much fencing is needed for the second garden? Explain your reasoning.

27. **Crafts**  Many quilts are designed using triangles. Quilters start with a template and trace around the template, outlining the triangles to be cut out. Explain why the triangles are congruent.

28. **Critical Thinking**  Determine whether each statement is *true* or *false*. If *true*, explain your reasoning. If *false*, show a counterexample.
   a. If two triangles are congruent, their perimeters are equal.
   b. If two triangles have the same perimeter, they are congruent.

Identify each motion as a **translation**, **reflection**, or **rotation**. (Lesson 5–3)

29.  
30.  
31.  

32. **Communication**  A support cable called a guy wire is attached to a utility pole to give it stability. Safety regulations require a minimum angle of $30^\circ$ between the pole and the guy wire. Determine the measure of the angle between the guy wire and the ground. (Lesson 5–2)

33. **Short Response**  If $m\angle R = 45$, classify $\angle R$ as acute, right, or obtuse. (Lesson 3–2)

34. **Multiple Choice**  Choose the *false* statement. (Lesson 1–3)
   A. Two points determine two lines.
   B. A line contains at least two points.
   C. Three points that are not on the same line determine a plane.
   D. If two planes intersect, then their intersection is a line.
Introducing the Congruence Postulates

Is it possible to show that two triangles are congruent without showing that all six pairs of corresponding parts are congruent? Let’s look for a shortcut.

Investigate

1. Use patty paper to investigate three pairs of congruent sides.
   a. Draw a triangle on a piece of patty paper.
   b. Copy the sides of the triangle onto another piece of patty paper and cut them out.
   c. Arrange the pieces so that they form a triangle.
   d. Is this triangle congruent to the original triangle? Explain your reasoning.
   e. Try to form another triangle. Is it congruent to the original triangle?
   f. Can three pairs of congruent sides be used to show that two triangles are congruent?
2. Use patty paper to investigate three pairs of congruent angles.
   a. Draw a triangle on a piece of patty paper.
   b. Copy each angle of the triangle onto a separate piece of patty paper and cut them out. Extend each ray of each angle to the edge of the patty paper.
   c. Arrange the pieces so that they form a triangle.
   d. Is this triangle congruent to the original triangle? Explain your reasoning.
   e. Try to form another triangle. Is this triangle congruent to the original triangle?
   f. Can three pairs of congruent angles be used to show that two triangles are congruent?

Extending the Investigation

In this investigation, you will determine which three pairs of corresponding parts can be used to show that two triangles are congruent.

Use patty paper or graphing software to investigate these six cases. (You have already investigated the first two.)
1. three pairs of congruent sides
2. three pairs of congruent angles
3. two pairs of congruent sides and the pair of congruent angles between them
4. two pairs of congruent sides and one pair of congruent angles not between them
5. two pairs of congruent angles and the pair of congruent sides between them
6. two pairs of congruent angles and one pair of congruent sides not between them

Presenting Your Conclusions

Here are some ideas to help you present your conclusions to the class.
- Make a poster that summarizes your results.
- Make a model with straws that illustrates why certain pairs of corresponding parts cannot be used to show that two triangles are congruent. Be sure to show counterexamples.

Investigation For more information on the congruence postulates, visit: www.geomconcepts.com
Triangles are common in construction, because triangles, unlike squares, maintain their shape under stress. You can see this yourself if you use straws and a string to make a triangle and a four-sided figure.

This rigidity hints at an underlying geometric concept: a triangle with three sides of a set length has exactly one shape.

### Hands-On Geometry Construction

**Materials:** compass, straightedge, scissors

**Step 1** Draw an acute scalene triangle on a piece of paper. Label its vertices $A$, $B$, and $C$ on the interior of each angle.

**Step 2** Construct a segment congruent to $\overline{AC}$. Label the endpoints of the segment $D$ and $E$.

**Step 3** Adjust the compass setting to the length of $\overline{AB}$. Place the compass at point $D$ and draw a large arc above $DE$.

**Step 4** Adjust the compass setting to the length of $\overline{CB}$. Place the compass at point $E$ and draw an arc to intersect the one drawn from point $D$. Label the intersection $F$.

**Step 5** Draw $DF$ and $EF$.

**Try These**

1. Label the vertices of $\triangle DEF$ on the interior of each angle. Then cut out the two triangles. Make a conjecture. Are the triangles congruent?

2. If the triangles are congruent, write a congruence statement.

3. Verify your conjecture with another triangle.
In the previous activity, you constructed a congruent triangle by using only the measures of its sides. This activity suggests the following postulate.

Postulate 5–1

SSS Postulate

Words: If three sides of one triangle are congruent to three corresponding sides of another triangle, then the triangles are congruent.

Model:

```
   A       B       S
   C       R       T
   P       Q       M
   L
```

Symbols: If \( AB \cong RS \), \( BC \cong ST \), and \( CA \cong TR \), then \( \triangle ABC \cong \triangle RST \).

Example 1

In two triangles, \( PQ \cong ML \), \( PR \cong MN \), and \( RQ \cong NL \). Write a congruence statement for the two triangles.

Draw a pair of congruent triangles. Identify the congruent parts with slashes. Label the vertices of one triangle.

Use the given information to label the vertices of the second triangle.

By SSS, \( \triangle PQR \cong \triangle MLN \).

Your Turn

a. In two triangles, \( ZY \cong FE \), \( XY \cong DE \), and \( XZ \cong DF \). Write a congruence statement for the two triangles.

In a triangle, the angle formed by two given sides is called the included angle of the sides.

Using the SSS Postulate, you can show that two triangles are congruent if their corresponding sides are congruent. You can also show their congruence by using two sides and the included angle.
### Example

Determine whether the triangles shown at the right are congruent. If so, write a congruence statement and explain why the triangles are congruent. If not, explain why not.

There are two pairs of congruent sides, \( \overline{NO} \cong \overline{YZ} \) and \( \overline{MO} \cong \overline{XZ} \). There is one pair of congruent angles, \( \angle O \cong \angle Z \), which is included between the sides.

Therefore, \( \triangle MNO \cong \triangle XYZ \) by SAS.

### Your Turn

b. Determine whether the triangles shown at the right are congruent by SAS. If so, write a congruence statement and tell why the triangles are congruent. If not, explain why not.

### Check for Understanding

#### Communicating Mathematics

1. Sketch and label a triangle in which \( \angle X \) is the included angle of \( \overline{YX} \) and \( \overline{ZX} \).

2. **You Try It**

Karen says that there is only one triangle with sides of 3 inches, 4 inches, and 5 inches. Mika says that there can be many different triangles with those measures. Who is correct? Explain your reasoning.

#### Guided Practice

Write a congruence statement for each pair of triangles represented. (Example 1)

3. \( \overline{RT} \cong \overline{UW}, \overline{RS} \cong \overline{UV}, \overline{TS} \cong \overline{WV} \)

4. \( \overline{AB} \cong \overline{GH}, \overline{BC} \cong \overline{HI}, \angle B \cong \angle H \)
Determine whether each pair of triangles is congruent. If so, write a congruence statement and explain why the triangles are congruent. (Example 2)

5. \( \triangle ABC \cong \triangle DEF \)
6. \( \triangle ABD \cong \triangle ECF \)

7. **Construction** Most roofs on residential buildings are made of triangular roof trusses. Explain how the SSS postulate guarantees that the triangles in the roof truss will remain rigid. (Example 1)

**Exercises**

**Practice**

Write a congruence statement for each pair of triangles represented.

8. \( \overline{JK} \cong \overline{MN}, \overline{LK} \cong \overline{ON}, \angle K \cong \angle N \)
9. \( \overline{CB} \cong \overline{EF}, \overline{CA} \cong \overline{ED}, \overline{BA} \cong \overline{FD} \)
10. \( \overline{XY} \cong \overline{CA}, \overline{XZ} \cong \overline{CB}, \angle X \cong \angle C \)
11. \( \overline{GH} \cong \overline{RT}, \overline{GI} \cong \overline{RS}, \overline{HI} \cong \overline{TS} \)

Determine whether each pair of triangles is congruent. If so, write a congruence statement and explain why the triangles are congruent.

12. \( \triangle ABC \cong \triangle DEF \)
13. \( \triangle ABD \cong \triangle ECF \)
14. \( \triangle ABC \cong \triangle DEF \)
15. \( \triangle ABD \cong \triangle ECF \)

Use the given information to determine whether the two triangles are congruent by SAS. Write yes or no.

16. \( \angle A \cong \angle D, \overline{AB} \cong \overline{DE}, \overline{BC} \cong \overline{EF} \)
17. \( \overline{EF} \cong \overline{CA}, \overline{BC} \cong \overline{ED}, \angle C \cong \angle E \)
18. \( \overline{BC} \cong \overline{DF}, \overline{BA} \cong \overline{EF}, \angle B \cong \angle F \)
19. \( \overline{AB} \cong \overline{DF}, \overline{CA} \cong \overline{DE}, \angle C \cong \angle F \)
20. **Carpentry**  Suppose you are building a rectangular bookcase. How could you provide additional support so that the back of the bookcase won’t shift?

21. **Landscaping**  When small trees are planted, they are usually supported with a wooden stake as shown at the right. Explain how the stake provides support against the wind.

22. **Critical Thinking**  Name the additional corresponding part needed to prove that the triangles below are congruent by SAS.

![Image of triangles](Exercise 21)

23. If \( \triangle PQR \cong \triangle CAB \), \( m\angle P = 45 \), and \( m\angle R = 38 \), find \( m\angle A \).  \((Lesson 5–4)\)

24. **Word Processing**  The button in some computer programs makes the indicated change in the position of the word “Hello.” Identify the change as a rotation, reflection, or translation.  \((Lesson 5–3)\)

25. The coordinates of the endpoints of a segment are given. Find the coordinates of the midpoint of each segment.  \((Lesson 2–5)\)

26. \((-1, -2), (-3, -8)\)

27. \((4, 8), (-3, -4)\)

28. **Multiple Choice**  Express 0.0025 in scientific notation.  \((Algebra Review)\)

A. \(2.5 \times 10^{-3}\)  
B. \(2.5 \times 10^{-4}\)  
C. \(2.5 \times 10^{-3}\)  
D. \(2.5 \times 10^{-4}\)

---

**Quiz 2**  \(Lessons 5–4 \text{ and } 5–5\)

1. **Design**  Which triangles in the figure appear to be congruent?  \((Lesson 5–4)\)

2. If \( \triangle XYZ \cong \triangle RST \), which angle is congruent to \( \angle S \)?  \((Lesson 5–4)\)

3. In two triangles, \( \overline{XZ} \cong \overline{BC} \), \( \overline{YZ} \cong \overline{AC} \), and \( \overline{YX} \cong \overline{AB} \). Write a congruence statement for the two triangles.  \((Lesson 5–5)\)

Determine whether each pair of triangles is congruent. If so, write a congruence statement and explain why the triangles are congruent.  \((Lesson 5–5)\)

4. \(\triangle ABC \quad \triangle DEF\)

5. \(\triangle MNP \quad \triangle LQR\)
The side of a triangle that falls between two given angles is called the **included side** of the angles. It is the one side common to both angles.

You can show that two triangles are congruent by using two angles and the included side of the triangles.

**Example**

In $\triangle PQR \cong \triangle KJL$, $\angle R \cong \angle K$, $\overline{RQ} \cong \overline{KL}$, and $\angle Q \cong \angle L$. Write a congruence statement for the two triangles.

Begin by drawing a pair of congruent triangles. Mark the congruent parts with arcs and slashes. Label the vertices of one triangle $P$, $Q$, and $R$.

Locate $K$ and $L$ on the unlabeled triangle in the same positions as $R$ and $Q$. The unassigned vertex must be $J$.

Therefore, $\triangle PQR \cong \triangle JKL$ by ASA.

**Your Turn**

a. In $\triangle DEF$ and $\triangle LMN$, $\angle D \cong \angle N$, $\overline{DE} \cong \overline{NL}$, and $\angle E \cong \angle L$. Write a congruence statement for the two triangles.
The Angle-Angle-Side Theorem is called a theorem because it can be derived from the ASA Postulate. In AAS, the S is not between the two given angles. Therefore, the S indicates a side that is not included between the two angles.

\[ \triangle ABC \text{ and } \triangle EDF \] each have one pair of sides and one pair of angles marked to show congruence. What other pair of angles must be marked so that the two triangles are congruent by AAS?

If \( \angle B \) and \( \angle F \) are marked congruent, then \( AB \) and \( EF \) would be included sides. However, AAS requires the nonincluded sides. Therefore, \( \angle C \) and \( \angle D \) must be marked congruent.

b. \( \triangle DEF \) and \( \triangle LMN \) each have one pair of sides and one pair of angles marked to show congruence. What other pair of angles must be marked so that the two triangles are congruent by AAS?

c. What other pair of angles must be marked so that the two triangles are congruent by ASA?
Determine whether each pair of triangles is congruent by SSS, SAS, ASA, or AAS. If it is not possible to prove that they are congruent, write not possible.

There are two pairs of congruent angles, \( \angle A \cong \angle F \) and \( \angle B \cong \angle D \). There is one pair of corresponding congruent sides, \( CB \cong ED \), which is not included between the angles.

Therefore, \( \triangle ABC \cong \triangle FDE \) by AAS.

There are two pairs of congruent angles, \( \angle M \cong \angle P \), which is not included between the sides. Since SSA is not a test for congruence, it is not possible to show the triangles are congruent from this information.

### Your Turn

d.

e.

### Check for Understanding

**Communicating Mathematics**

1. Sketch and label triangle \( XYZ \) in which \( XZ \) is an included side. Then name the two angles \( XZ \) is between.

2. Explain how you could construct a triangle congruent to a given triangle using ASA.

3. Write a few sentences explaining the SSS, SAS, ASA, and AAS tests for congruence. Give an example of each.

**Guided Practice**

Write a congruence statement for each pair of triangles represented.

(Example 1)

4. In \( \triangle DEF \) and \( \triangle RST \), \( \angle D \cong \angle R \), \( \angle E \cong \angle T \), and \( DE \cong RT \).

5. In \( \triangle ABC \) and \( \triangle XYZ \), \( \angle A \cong \angle X \), \( \angle B \cong \angle Y \), and \( BC \cong YZ \).
Name the additional congruent parts needed so that the triangles are congruent by the postulate or theorem indicated.  (Example 2)

6. ASA

7. AAS

Determine whether each pair of triangles is congruent by SSS, SAS, ASA, or AAS. If it is not possible to prove that they are congruent, write not possible.  (Examples 3 & 4)

8.

9.

10. Surveying  Two surveyors 560 yards apart sight a marker C on the other side of a canyon at angles of 27° and 38°. What will happen if they repeat their measurements from the same positions on another day? Explain your reasoning.  (Example 1)

Exercises

Practice

Write a congruence statement for each pair of triangles represented.

11. In \( \triangle QRS \) and \( \triangle TUV \), \( \angle Q \cong \angle T \), \( \angle S \cong \angle U \), and \( QS \cong TU \).

12. In \( \triangle ABC \) and \( \triangle DEF \), \( AC \cong ED \), \( \angle C \cong \angle D \), and \( \angle B \cong \angle F \).

13. In \( \triangle RST \) and \( \triangle XYZ \), \( \angle S \cong \angle X \), \( ST \cong XZ \), and \( \angle T \cong \angle Z \).

14. In \( \triangle MNO \) and \( \triangle PQR \), \( \angle M \cong \angle P \), \( \angle N \cong \angle R \), and \( NO \cong RQ \).

Name the additional congruent parts needed so that the triangles are congruent by the postulate or theorem indicated.

15. ASA

16. AAS

17. AAS

18. ASA
Determine whether each pair of triangles is congruent by SSS, SAS, ASA, or AAS. If it is not possible to prove that they are congruent, write not possible.

19. 20. 21. 22.

23. **Math History** The figure shows how the Greek mathematician Thales (624 B.C.–547 B.C.) determined the distance from the shore to enemy ships during a war. He sighted the ship from point $P$ and then duplicated the angle at $\angle QPT$. The angles at point $Q$ are right angles. Explain why $QT$ represents the distance from the shore to the ship.

24. **Critical Thinking** In $\triangle RST$ and $\triangle UVW$, $\angle R \cong \angle U$, $\angle S \cong \angle V$, and $RT \cong UW$. So, $\triangle RST \cong \triangle UVW$ by AAS. Prove $\triangle RST \cong \triangle UVW$ by ASA.

25. In two triangles, $MN \cong PQ$, $MO \cong PR$, and $NO \cong QR$. Write a congruence statement for the two triangles and explain why the triangles are congruent. (Lesson 5–5)

If $\triangle HRT \cong \triangle MNP$, complete each statement. (Lesson 5–4)

26. $\angle R \cong \text{?}$
27. $HT \cong \text{?}$
28. $\angle P \cong \text{?}$

29. **Multiple Choice** The graph shows the sales of sunglasses from 1990 to 1997. Between which two years was the percent of increase the greatest? (Statistics Review)
   A 1990 to 1991
   B 1991 to 1992
   C 1992 to 1993
   D 1994 to 1995

Source: Sunglass Association of America
Understanding and Using the Vocabulary

After completing this chapter, you should be able to define each term, property, or phrase and give an example or two of each.

- acute triangle (p. 188)
- base (p. 189)
- base angles (p. 189)
- congruent triangle (p. 203)
- corresponding parts (p. 203)
- equiangular triangle (p. 195)
- equilateral triangle (p. 189)
- image (p. 199)
- included angle (p. 211)
- included side (p. 215)
- isometry (p. 200)
- isosceles triangle (p. 189)
- legs (p. 189)
- mapping (p. 199)
- obtuse triangle (p. 188)
- preimage (p. 199)
- reflection (p. 198)
- right triangle (p. 188)
- rotation (p. 198)
- scalene triangle (p. 189)
- transformation (p. 199)
- translation (p. 198)
- triangle (p. 188)
- vertex (p. 188)
- vertex angle (p. 189)

State whether each sentence is true or false. If false, replace the underlined word(s) to make a true statement.

1. Triangles can be classified by their angles and sides.
2. An isosceles triangle has two vertex angles.
3. The sum of the measures of the angles of a triangle is 360°.
4. An equiangular triangle is defined as a triangle with three congruent sides.
5. The acute angles of a right triangle are supplementary.
6. SSS, SAS, ASA, and AAS are ways to show that two triangles are congruent.
7. A translation is an example of a transformation.
8. An equilateral triangle is also an isosceles triangle.
9. AAS refers to two angles and their included side.
10. Reflections are sometimes called turns.

Skills and Concepts

- **Objectives and Examples**
  - **Lesson 5–1** Identify the parts of triangles and classify triangles by their parts.

  The triangle is acute and isosceles.

- **Review Exercises**
  - Classify each triangle by its angles and by its sides.
Chapter 5 Study Guide and Assessment

Objectives and Examples

- **Lesson 5–2** Use the Angle Sum Theorem.

  Find \( m \angle A \) in \( \triangle ABC \).

  \[
  m \angle A + m \angle B + m \angle C = 180 \]
  \[
  m \angle A + 120 + 38 = 180 \]
  \[
  m \angle A + 158 = 180 \]
  \[
  m \angle A = 22
  \]

- **Lesson 5–3** Identify translations, reflections, and rotations and their corresponding parts.

  \( \triangle ABC \rightarrow \triangle RST \) by a translation.

  \( \angle R \) is the image of \( \angle A \).

  \( BC \) corresponds to \( ST \).

- **Lesson 5–4** Name and label corresponding parts of congruent triangles.

  Write a congruence statement for the two triangles.

  \( \triangle ABC \cong \triangle DEF \)

  **Review Exercises**

  Find the value of each variable.

  13.

  14.

  15.

  16. Name the angle that corresponds to \( \angle D \).

  17. Name the image of \( \triangle ABE \).

  18. Name the image of \( AE \).

  19. Identify the transformation that occurred in the mapping.

  Complete each congruence statement.

  20.

  21.
Chapter 5 Study Guide and Assessment

Objectives and Examples

- **Lesson 5–5** Use the SSS and SAS tests for congruence.

  \[ \triangle RST \cong \triangle LNM \text{ by SAS.} \]

- **Lesson 5–6** Use the ASA and AAS tests for congruence.

  \[ \triangle XYZ \cong \triangle GHF \text{ by AAS.} \]

Review Exercises

Determine whether each pair of triangles is congruent. If so, write a congruence statement and explain why the triangles are congruent.

22. 23.

24. 25.

Applications and Problem Solving

26. Maps Classify the triangle by its sides. (Lesson 5–1)

27. Algebra Find the measure of \( \angle A \) in \( \triangle ABC \). (Lesson 5–2)

28. Construction The W-truss is the most widely used of light wood trusses. Identify two pairs of triangles in the truss below that appear to be congruent. (Lesson 5–4)
Choose the letter of the description that best matches each term.

1. scalene triangle
   a. has a right angle
2. right triangle
   b. all sides are congruent
3. isosceles triangle
   c. no sides are congruent
4. acute triangle
   d. has a vertex angle
5. equilateral triangle
   e. all angles are acute
6. equiangular triangle
   f. all angles are congruent

Find the value of each variable.

7. \[ x^\circ \]
   \[ 85^\circ \]
   \[ 35^\circ \]

8. \[ c^\circ \]
   \[ c^\circ \]
   \[ c^\circ \]

9. \[ 76^\circ \]
   \[ 66^\circ \]
   \[ a^\circ \]

Identify each motion as a translation, reflection, or rotation.

10. [Translation diagram]
11. [Reflection diagram]
12. [Rotation diagram]

Complete each congruence statement.

13. \[ \triangle ABC \cong \triangle \_?\_ \]

14. \[ \triangle \_?\_ \cong \triangle ABC \]

15. \[ \triangle \_?\_ \cong \triangle FDE \]

16. In \( \triangle CDE \), identify the included angle for sides \( \overline{CD} \) and \( \overline{EC} \).

Determine whether each pair of triangles is congruent by SSS, SAS, ASA, or AAS. If it is not possible to prove that they are congruent, write not possible.

17. [Multiple triangle diagrams]
18. [Multiple triangle diagrams]
19. [Multiple triangle diagrams]

20. **Sports**  The sail for a sailboat looks like a right triangle. If the angle at the top of the sail measures 54°, what is the measure of the acute angle at the bottom?

www.geomconcepts.com/chapter_test
Statistics Problems

On some standardized tests, you will calculate the mean, median, and mode of a data set. You will also choose the most appropriate measure for a data set. On the SAT and ACT, you will apply the concept of the mean to solve problems.

\[
\text{mean} = \frac{\text{sum of the numbers}}{\text{number of numbers}}
\]

\[
\text{median} = \text{middle number of a set arranged in numerical order}
\]

\[
\text{mode} = \text{the number(s) that occurs most often}
\]

State Test Example

The height of ten National Champion Trees are listed in the table below. What is the median, in feet, of the heights?

<table>
<thead>
<tr>
<th>Tree</th>
<th>Height (ft)</th>
<th>Tree</th>
<th>Height (ft)</th>
</tr>
</thead>
<tbody>
<tr>
<td>American Beech</td>
<td>115</td>
<td>Loblolly Pine</td>
<td>148</td>
</tr>
<tr>
<td>Black Willow</td>
<td>76</td>
<td>Pinyon Pine</td>
<td>69</td>
</tr>
<tr>
<td>Coast Douglas Fir</td>
<td>329</td>
<td>Sugar Maple</td>
<td>87</td>
</tr>
<tr>
<td>Coast Redwood</td>
<td>313</td>
<td>Sugar Pine</td>
<td>232</td>
</tr>
<tr>
<td>Giant Sequoia</td>
<td>275</td>
<td>White Oak</td>
<td>79</td>
</tr>
</tbody>
</table>

Hint If there is no single middle number, find the median by calculating the mean of the two middle values.

Solution To find the median, first list the heights in numerical order.
69 76 79 87 115 148 232 275 313 329
Since there are ten numbers, there is no middle number. The two numbers in the middle are 115 and 148. Calculate the mean of these two numbers.

\[
\frac{115 + 148}{2} = \frac{263}{2} = 131\frac{1}{2}
\]

The median is 131\(\frac{1}{2}\) feet.

SAT Example

If the average of five numbers is 32 and the average of two of the numbers is 20, then what is the sum of the remaining three numbers?

A. 12  B. 40  C. 46\(\frac{2}{3}\)  D. 120  E. 140

Hint Use the formula for mean to calculate the sum of the numbers.

Solution On the SAT, average is the same as mean. First find the sum of the five numbers. Then use the formula for the mean. You know the average (32) and the number of numbers (5).

\[
32 = \frac{\text{sum of the five numbers}}{5}
\]

\[
5 \cdot 32 = \frac{\text{sum of the five numbers}}{5}
\]

160 = sum of the five numbers

Use the same method to find the sum of the two numbers.

\[
20 = \frac{\text{sum of the two numbers}}{2}
\]

40 = sum of the two numbers

You can find the sum of the other three numbers by subtracting: (sum of the five numbers) – (sum of the two numbers) = 160 – 40 or 120. The answer is D.
Chapter 5 Preparing for Standardized Tests

After you work each problem, record your answer on the answer sheet provided or on a sheet of paper.

Multiple Choice

1. Mr. Mendosa planned to have the trim on his house painted and obtained estimates from five different companies. The estimates were $950, $850, $995, $1000, and $950. What is the mode of these estimates?
   A $150  B $949  C $950  D $995

2. \( \sqrt{64 + 36} = ? \)
   A 10  B 14  C 28  D 48  E 100

3. Jared’s study group recorded the amount of time they spent on math homework one day. Here are the results (in minutes): 30, 29, 32, 25, 36, 20, 30, 26, 56, 45, 33, and 34. What was the median time spent?
   A 20 min  B 25 min  C 30 min  D 31 min

4. The figure below shows an example of a—

5. Yoshi wants to buy a sweater priced at $59.95. If the sales tax rate is 6%, which is the best estimate of the tax paid on the sweater?
   A $3.00  B $3.60  C $4.00  D $4.20

6. How many even integers are there between 2 and 100, not including 2 and 100?
   A 98  B 97  C 50  D 49  E 48

7. Jenny recorded high temperatures every day for a week. The temperatures, in degrees Fahrenheit, were 48, 55, 60, 55, 52, 47, and 40. What was the mean temperature?
   A 51  B 52  C 55  D 60

8. What is the value of \( x \) in the figure?
   A 10  B 18  C 27  D 63

Grid In

9. There are 24 fish in an aquarium. If \( \frac{1}{8} \) of them are tetras and \( \frac{2}{5} \) of the remaining fish are guppies, how many guppies are there?

Extended Response

10. The table shows the percent of new passenger cars imported into the United States by country of origin in 1997.

<p>| Percent of New Passenger Cars Imported into U.S. by Country of Origin |
|-----------------------------|-----------------|</p>
<table>
<thead>
<tr>
<th>Country</th>
<th>New Cars (percent)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Canada</td>
<td>40</td>
</tr>
<tr>
<td>Germany</td>
<td>7</td>
</tr>
<tr>
<td>Japan</td>
<td>32</td>
</tr>
<tr>
<td>Mexico</td>
<td>13</td>
</tr>
<tr>
<td>South Korea</td>
<td>5</td>
</tr>
<tr>
<td>Other</td>
<td>3</td>
</tr>
</tbody>
</table>

Source: Bureau of Census, Foreign Trade Division

Part A Make a circle graph to show the data. Label each section of the graph with the percent of imported cars.

Part B The total number of cars imported was about 4.4 million. Use this information to determine the number of cars imported from outside North America.
