Make this Foldable to help you organize information about the material in this chapter. Begin with a sheet of notebook paper.

1. **Fold** lengthwise to the holes.

2. **Cut** along the top line and then cut 10 tabs.

3. **Label** each tab with important terms. Store the Foldable in a 3-ring binder.

**Reading and Writing** As you read and study the chapter, write definitions and examples of important terms under the tab.
Problem-Solving Workshop

Chapter 9

Project
A local furniture store is having a contest to see who can design the best dream bedroom for a teenager. Design a floor plan with furniture using a scale where \( \frac{1}{2} \) inch represents one foot.

Working on the Project
Work with a partner and discuss what the room will need. Here are a few questions to get you started.

- What furniture do you want in the room?
- What size will you make your dream room?

Technology
- Use software to create your design.
- Use word processing software to write a paragraph explaining your floor design.

Research
For more information about buying furniture, visit: www.geomconcepts.com

Presenting the Project
Draw the floor plan of your dream room. Use colors to enhance your design. Along with your floor plan, include a paragraph that contains the following information:
- a description of the furniture you chose to include in your dream room, and
- an explanation of how you used proportions in this project.
In 2000, about 180 million tons of solid waste was created in the United States. Paper made up about 72 million tons of this waste. The ratio of paper waste to total solid waste is 72 to 180. This ratio can be written in the following ways.

\[ \frac{72}{180} = \frac{72}{180} \]

All ratios should be written in simplest form. Because all fractions can be written as decimals, it is sometimes useful to express ratios in decimal form.

**Examples**

1. Write each ratio in simplest form.

   \[ \frac{45}{340} = \frac{45}{340} \]

   Divide the numerator and denominator by 5.

   \[ \frac{45 \div 5}{340 \div 5} = \frac{9}{68} \]

2. six days to two weeks

   To write this as a ratio, the units of measure must be the same. Write both using days. There are seven days in one week, so two weeks equal 14 days. The ratio is \( \frac{6}{14} \) or \( \frac{3}{7} \).

**Your Turn**

a. \( \frac{18}{24} \)

b. 10 kilometers to 20,000 meters

**Definition of Ratio**

Words: A ratio is a comparison of two numbers by division.

Symbols: \( \frac{a}{b} \), \( a:b \), \( \frac{a}{b} \), or \( a \div b \), where \( b \neq 0 \)
A proportion is an equation that shows two equivalent ratios.

\[
\frac{20}{30} = \frac{2}{3}
\]

Every proportion has two **cross products**. In the proportion above, the terms 20 and 3 are called the **extremes**, and 30 and 2 are called the **means**. The cross products are 20(3) and 30(2). The cross products are always equal in a proportion.

You can use cross products to solve equations in proportion form. Remember that you should always check your solution in the original proportion.

**Example**

Solve \( \frac{15}{35} = \frac{3}{2x + 1} \).

\[
\begin{align*}
15 &= 3 \\
30x + 15 &= 105 \\
30x &= 90 \\
x &= 3
\end{align*}
\]

**Check:**

\[
\frac{15}{35} = \frac{3}{2(3) + 1}
\]

Replace \( x \) with 3.

\[
\frac{15}{35} = \frac{3}{7}
\]

2(3) + 1 = 7

15(7) = 35(3)

\[ 105 = 105 \checkmark \]

The solution is 3.

(continued on the next page)
Proportions can help you solve real-life problems. The ratios in the proportions must be written in the same order.

In an engine, the volume of the cylinder changes as the piston moves up and down. The compression ratio is the expanded volume of the cylinder to the compressed volume of the cylinder. One car with a V6 engine has a compression ratio of 9.4 to 1. If the compressed volume of the cylinder is 25 cubic inches, find its expanded volume.

\[
\frac{\text{expanded volume}}{\text{compressed volume}} = \frac{9.4}{1} = \frac{x}{25} \quad \text{Cross Products}
\]

\[9.4(25) = 1(x) \quad 235 = x\]

The cylinder’s expanded volume is 235 cubic inches.

Check for Understanding

**Communicating Mathematics**

1. Write two ratios that form a proportion and two ratios that do not form a proportion.

2. Explain how you would solve the proportion \(\frac{14}{21} = \frac{x}{24}\).

3. You Tackling? Lawanda says that if \(\frac{7}{8} = \frac{x}{y}\), then \(\frac{8}{7} = \frac{y}{x}\). Paul disagrees. Who is correct? Explain your reasoning.
Guided Practice

Write each ratio as a fraction in simplest form.

Sample: 6 ounces to 12 ounces

\[
\frac{6 \text{ oz}}{12 \text{ oz}} = \frac{6}{12} = \frac{6 \div 6}{12 \div 6} = \frac{1}{2}
\]

4. 7 feet to 3 feet 5. 3 grams to 11 grams
6. 16 cm to 5 cm 7. 21 miles to 16 miles
8. 15 km to 5 km 9. 6 meters to 10 meters

Write each ratio in simplest form. \((\text{Examples 1} \& 2)\)

10. \(\frac{4}{2}\) 11. \(\frac{72}{100}\)
12. 3 millimeters to 1 centimeter

Solve each proportion. \((\text{Example 3})\)

13. \(\frac{x}{3} = \frac{12}{18}\) 14. \(\frac{6}{2x} = \frac{15}{30}\)
15. \(\frac{7}{3} = \frac{3x - 1}{6}\)

16. Mechanics The gear ratio is the number of teeth on the driving gear to the number of teeth on the driven gear. If the gear ratio is 5:2 and the driving gear has 35 teeth, how many teeth does the driven gear have? \((\text{Example 4})\)

Exercises

Practice

Write each ratio in simplest form.

17. \(\frac{2}{10}\) 18. \(\frac{8}{12}\) 19. \(\frac{10}{22}\)
20. \(\frac{18}{36}\) 21. \(\frac{45}{21}\) 22. \(\frac{40}{12}\)
23. 44 centimeters to 2 meters 24. 6 inches to 2 feet
25. 6 quarts to 1 pint 26. 3 liters to 300 milliliters

Solve each proportion.

27. \(\frac{2}{5} = \frac{4}{x}\) 28. \(\frac{12}{5} = \frac{x}{10}\) 29. \(\frac{36}{3} = \frac{12}{x}\)
30. \(\frac{3x}{27} = \frac{2}{9}\) 31. \(\frac{14}{x - 1} = \frac{7}{4}\) 32. \(\frac{1}{x + 3} = \frac{3}{29}\)
33. \(\frac{5}{9} = \frac{5}{x - 3}\) 34. \(\frac{x + 2}{16} = \frac{7}{4}\) 35. \(\frac{30 - x}{x} = \frac{3}{2}\)

36. If \(3:x = 18:24\), find the value of \(x\).

37. If \(3\) to \(4\) and \(5x - 1\) to \(12\) form a proportion, what is the value of \(x\)?
38. Refer to the triangles below.

![Triangles](Image)

a. Write the ratio of $AB$ to $DE$.
b. Write the ratio of $AC$ to $DF$.
c. Do the two ratios form a proportion? Explain.

If $a = 3$, $b = 2$, $c = 6$, and $d = 4$, determine whether each pair of ratios forms a proportion.

39. $\frac{b}{a} = \frac{d}{c}$

40. $\frac{c}{b} = \frac{d}{a}$

41. $\frac{a+b}{b} = \frac{c+d}{d}$

42. **Money**  The average number of days Americans worked in a recent year to pay taxes is shown below.

![Days Worked to Pay Taxes](Image)

Source: Tax Foundation

a. Write a ratio of the number of days worked to pay income taxes to the total number of days in a year.
b. Write a ratio of the number of days worked to pay property taxes to the number of days to pay sales and excise taxes.

43. **Environment**  If 2500 square feet of grass supplies enough oxygen for a family of four, how much grass is needed to supply oxygen for a family of five?

44. **Science**  Light travels approximately 1,860,000 miles in 10 seconds. How long will it take light to travel the 93,000,000 miles from the sun to Earth?

45. **Medicine**  Antonio is a nurse. A doctor tells him to give a patient 60 milligrams of acetaminophen. Antonio has a liquid medication that contains 240 milligrams of acetaminophen per 10 milliliters of medication. How many milliliters of the medication should he give the patient?
46. Critical Thinking  

The geometric mean between two positive numbers $a$ and $b$ is the positive number $x$ in $\frac{a}{x} = \frac{x}{b}$. Solve $\frac{4}{x} = \frac{x}{9}$ to find the geometric mean between 4 and 9.

47. Mixed Review

Find the length of median $AB$ in trapezoid $JKLM$ if $JM = 14$ inches and $KL = 21$ inches.  

(Lesson 8–5)

48. Puzzles  

A crossword puzzle is made up of various parallelograms. Identify the parallelogram that is outlined as a rectangle, rhombus, square, or none of these.  

(Lesson 8–4)

49. Determine if the numbers 8, 15, and 17 can be measures of the sides of a triangle.  

(Lesson 7–4)

50. In the triangle shown, $m_5 = 9x$, $m_4 = 6x + 2$, and $m_2 = 92$. Find the values of $x$, $m_5$, and $m_4$.  

(Lesson 7–2)

For each triangle, tell whether the red segment or line is an altitude, a perpendicular bisector, both, or neither.  

(Lesson 6–2)

51.  

52.  

53.  

54. Short Response  

According to the building code in Plainfield, Connecticut, the slope of a stairway cannot be steeper than 0.82. The stairs in Troy’s home measure 10.5 inches deep and 7.5 inches high. Do the stairs in his home meet the code requirements? Explain.  

(Lesson 4–5)
A **polygon** is a closed figure in a plane formed by segments called **sides**. It is a general term used to describe a geometric figure with at least three sides. Polygons that are the same shape but not necessarily the same size are called **similar polygons**.

The two triangles shown below are similar. For naming similar polygons, the vertices are written in order to show the corresponding parts. The symbol for similar is \( \sim \).

\[ \triangle RST \sim \triangle VWX \]

<table>
<thead>
<tr>
<th>Corresponding Angles</th>
<th>Corresponding Sides</th>
</tr>
</thead>
<tbody>
<tr>
<td>( \angle R \leftrightarrow \angle V )</td>
<td>( RS \leftrightarrow VW )</td>
</tr>
<tr>
<td>( \angle S \leftrightarrow \angle W )</td>
<td>( ST \leftrightarrow WX )</td>
</tr>
<tr>
<td>( \angle T \leftrightarrow \angle X )</td>
<td>( TR \leftrightarrow XV )</td>
</tr>
</tbody>
</table>

Recall that in congruent figures, corresponding angles and sides are congruent. In similar figures, corresponding angles are congruent, and the measures of corresponding sides have equivalent ratios, or are proportional.

\[ \angle R \equiv \angle V, \angle S \equiv \angle W, \angle T \equiv \angle X, \text{ and } \frac{RS}{VW} = \frac{ST}{WX} = \frac{TR}{XV} \]

**Words:** Two polygons are similar if and only if their corresponding angles are congruent and the measures of their corresponding sides are proportional.

**Model:**

```
A   C
B   D
```

\[ \frac{AB}{EF} = \frac{BC}{FG} = \frac{CD}{GH} = \frac{DA}{HE} \text{ and } \]

\[ \angle A \equiv \angle E, \angle B \equiv \angle F, \]

\[ \angle C \equiv \angle G, \angle D \equiv \angle H \]

**Symbols:** polygon \( ABCD \sim \) polygon \( EFGH \)
Example 1

Determine if the polygons are similar. Justify your answer.

Since \( \frac{4}{8} = \frac{5}{10} = \frac{4}{8} = \frac{5}{10} \), the measures of the sides of the polygons are proportional. However, the corresponding angles are not congruent. The polygons are not similar.

Your Turn

Knowing several measures of two similar figures may allow you to find the measures of missing parts.

Example 2

Find the values of \( x \) and \( y \) if \( \triangle RST \sim \triangle JKL \).

Use the corresponding order of the vertices to write proportions.

\[
\frac{RS}{JK} = \frac{ST}{KL} = \frac{TR}{LJ} \quad \text{Definition of similar polygons}
\]

\[
\frac{5}{x} = \frac{6}{y + 2} = \frac{4}{7} \quad \text{Substitution}
\]

Write the proportion that can be solved for \( x \).

\[
5(7) = x(4) \quad \text{Cross Products}
\]

\[
35 = 4x \quad \text{Divide each side by 4.}
\]

\[
8\frac{3}{4} = x
\]

Now write the proportion that can be solved for \( y \).

\[
\frac{6}{y + 2} = \frac{4}{7}
\]

\[
6(7) = (y + 2)4 \quad \text{Cross Products}
\]

\[
42 = 4y + 8 \quad \text{Distributive Property}
\]

\[
42 - 8 = 4y + 8 - 8 \quad \text{Subtract 8 from each side.}
\]

\[
34 = 4y \quad \text{Divide each side by 4.}
\]

\[
\frac{34}{4} = \frac{4y}{4}
\]

\[
8\frac{1}{2} = y
\]

Therefore, \( x = 8\frac{3}{4} \) and \( y = 8\frac{1}{2} \).
c. Find the values of \( x \) and \( y \) if \( \triangle ABC \sim \triangle DEF \).

Scale drawings are often used to represent something that is too large or too small to be drawn at actual size. Contractors use scale drawings called blueprints to represent the floor plan of a house to be constructed. The blueprint and the floor plan are similar.

In the blueprint, 1 inch represents an actual length of 16 feet. Find the actual dimensions of the living room.

On the blueprint, the living room is \( 1\frac{1}{2} \) inches long and \( 1\frac{3}{4} \) inches wide. Use proportions to find the actual dimensions.

\[
\text{blueprint} \rightarrow \frac{1 \text{ in.}}{16 \text{ ft}} = \frac{1\frac{1}{2} \text{ in.}}{x \text{ ft}} \quad \leftarrow \text{blueprint actual}
\]

\[
1(x) = 16 \left( \frac{1\frac{1}{2}}{1} \right) \quad \text{Cross Products}
\]

\[
x = 24
\]

\[
\text{blueprint} \rightarrow \frac{1 \text{ in.}}{16 \text{ ft}} = \frac{1\frac{3}{4} \text{ in.}}{y \text{ ft}} \quad \leftarrow \text{blueprint actual}
\]

\[
1(y) = 16 \left( \frac{1\frac{3}{4}}{1} \right) \quad \text{Cross Products}
\]

\[
y = 20
\]

The actual dimensions of the living room are 24 feet by 20 feet.

d. Use the blueprint to find the actual dimensions of the kitchen.
Check for Understanding

1. Compare and contrast congruent polygons and similar polygons.
2. Explain how to find an actual distance using a scale drawing.
3. Draw two similar pentagons on grid paper. Label the vertices of the pentagons. Name the corresponding angles and sides. Write a proportion for the measures of the sides.

Guided Practice

Determine whether each pair of polygons is similar. Justify your answer.  (Example 1)

4. \[

Determine whether each pair of polygons is similar. Justify your answer.

15. 16. 17.

Each pair of polygons is similar. Find the values of \( x \) and \( y \).

18. 19. 20.

Determine whether each statement is always, sometimes, or never true.

21. Similar polygons are also congruent.
22. Congruent polygons are also similar.

23. Sports A soccer field is 91 meters by 46 meters. Make a scale drawing of the field if 1 millimeter represents 1 meter.

24. Publishing Mi-Ling is working on the school yearbook. She must reduce a photo that is 4 inches wide by 5 inches long to fit in a space 3 inches wide. How long will the reduced photo be?

25. Automotive Design Tracy is drawing a scale model of a car she is designing. If \( \frac{1}{2} \) inch on the drawing represents 28 inches, find each measurement on the actual car.
   a. length
   b. height
   c. wheelbase
26. **Travel** Each year, many tourists visit Madurodam in the Netherlands. Madurodam is a miniature town where 1 meter represents 25 meters. How high is a structure in Madurodam that represents a building that is actually 30 meters high?

27. **Critical Thinking** Marquis is doing a report on Wyoming. The state is approximately a rectangle measuring 362 miles by 275 miles. If Marquis wishes to draw the largest possible map of Wyoming on an \(8\frac{1}{2}\)-inch by 11-inch piece of paper, how many miles should one inch represent?

28. Find the value of \(y\) if \(4:y = 16:36\). \((Lesson 9–1)\)

29. Trapezoid TAHS is isosceles. Find \(m\angle T\), \(m\angle H\), and \(m\angle A\). \((Lesson 8–5)\)

30. In quadrilateral QRST, diagonal QS bisects diagonal RT. Is QRST a parallelogram? Explain. \((Lesson 8–3)\)

31. **Short Response** In right triangle ASP, \(m\angle S = 90\). Which side has the greatest measure? \((Lesson 7–3)\)

32. **Multiple Choice** Which triangle is not obtuse? \((Lesson 5–1)\)

33. **Mixed Review**

   28. Find the value of \(y\) if \(4:y = 16:36\). \((Lesson 9–1)\)

   29. Trapezoid TAHS is isosceles. Find \(m\angle T\), \(m\angle H\), and \(m\angle A\). \((Lesson 8–5)\)

   30. In quadrilateral QRST, diagonal QS bisects diagonal RT. Is QRST a parallelogram? Explain. \((Lesson 8–3)\)

   31. **Short Response** In right triangle ASP, \(m\angle S = 90\). Which side has the greatest measure? \((Lesson 7–3)\)

   32. **Multiple Choice** Which triangle is not obtuse? \((Lesson 5–1)\)

---

**Quiz 1**

Lessons 9–1 and 9–2

**Solve each proportion.** \((Lesson 9–1)\)

1. \(\frac{2}{x} = \frac{8}{12}\)

2. \(\frac{18}{4x} = \frac{3}{2}\)

**Each pair of polygons is similar. Find the values of** \(x\) and \(y\). \((Lesson 9–2)\)

4. \(\frac{8}{6} = \frac{4}{x}\)

5. \(\frac{8}{6} = \frac{6}{y - 4}\)
The Bank of China building in Hong Kong is one of the ten tallest buildings in the world. Designed by American architect I. M. Pei, the outside of the 70-story building is sectioned into triangles, which are meant to resemble the trunk of a bamboo plant. Some of the triangles are similar, as shown below.

In previous chapters, you learned several basic tests for determining whether two triangles are congruent. Recall that each congruence test involves only three corresponding parts of each triangle. Likewise, there are tests for similarity that will not involve all the parts of each triangle.

**Hands-On Geometry**

**Materials:** ruler, protractor

**Step 1** On a sheet of paper, use a ruler to draw a segment 2 centimeters in length. Label the endpoints of the segment A and B.

**Step 2** Use a protractor to draw an angle at A so that \( \angle A = 87 \). Draw an angle at B so that \( \angle B = 38 \). Extend the sides of \( \angle A \) and \( \angle B \) so that they intersect to form a triangle. Label the third vertex C.

**Step 3** Now draw a segment 4 centimeters in length. Label the endpoints D and E.

**Step 4** Use a protractor to draw an angle at D so that \( \angle D = 87 \). Draw an angle at E so that \( \angle E = 38 \). Extend the sides of \( \angle D \) and \( \angle E \) to form a triangle. Label the third vertex F.

**Try These**

1. What is \( m\angle C \)? What is \( m\angle F \)?
2. Use a ruler to find \( BC \), \( CA \), \( EF \), and \( FD \).
3. Find \( \frac{AB}{DE} \), \( \frac{BC}{EF} \), and \( \frac{CA}{FD} \).
4. Are the triangles similar? Why or why not?
The activity suggests Postulate 9–1.

**Postulate 9–1**

**AA Similarity**

**Words:** If two angles of one triangle are congruent to two corresponding angles of another triangle, then the triangles are similar.

**Model:**

**Symbols:** If \( \angle A \cong \angle D \) and \( \angle B \cong \angle E \), then \( \triangle ABC \sim \triangle DEF \).

In \( \triangle PQR \) and \( \triangle WXY \), if \( \angle P \cong \angle W \) and \( \angle Q \cong \angle X \), then the triangles are similar. By definition of similar polygons, there are four other parts of the triangles that are related.

\[
\angle R \cong \angle Y \quad \frac{PQ}{WX} = \frac{QR}{XY} = \frac{RP}{YW} \quad \triangle PQR \sim \triangle WXY
\]

Two other tests are used to determine whether two triangles are similar.

**Theorem 9–2**

**SSS Similarity**

**Words:** If the measures of the sides of a triangle are proportional to the measures of the corresponding sides of another triangle, then the triangles are similar.

**Model:**

**Symbols:** If \( \frac{AB}{DE} = \frac{BC}{EF} = \frac{CA}{FD} \), then \( \triangle ABC \sim \triangle DEF \).

A fractal is a geometric figure that is created by repeating the same process over and over. One characteristic of a fractal is that it has a self-similar shape. The Sierpinski Triangle shown below is an example of a fractal.

**Theorem 9–3**

**SAS Similarity**

**Words:** If the measures of two sides of a triangle are proportional to the measures of two corresponding sides of another triangle and their included angles are congruent, then the triangles are similar.

**Model:**

**Symbols:** If \( \frac{AB}{DE} = \frac{BC}{EF} \) and \( \angle B \cong \angle E \), then \( \triangle ABC \sim \triangle DEF \).
Examples

1. Determine whether the triangles are similar. If so, tell which similarity test is used and complete the statement.

\[ \triangle GHK \sim \triangle \, ? \]

Since \( \frac{6}{9} = \frac{10}{15} = \frac{14}{21} \), the triangles are similar by SSS Similarity. Therefore, \( \triangle GHK \sim \triangle JMP \).

2. Find the value of \( x \).

To see the corresponding parts more easily, flip \( \triangle QRN \) so that it is in the same position as \( \triangle XWT \).

Since \( \angle R \) and \( \angle W \) are right angles, they are congruent. We also know that \( \frac{12}{4} = \frac{9}{3} \). Therefore, \( \triangle QRN \sim \triangle XWT \) by SAS Similarity. Use the definition of similar polygons to find \( x \).

\[
\frac{QR}{XW} = \frac{NQ}{TX} \quad \text{Definition of Similar Polygons}
\]

\[
\frac{9}{3} = \frac{5}{x} \quad QR = 9, \ XW = 3, \ NQ = x, \ TX = 5
\]

\[
9(5) = 3(x) \quad \text{Cross Products}
\]

\[
45 = 3x
\]

\[
\frac{45}{3} = \frac{3x}{3} \quad \text{Divide each side by 3.}
\]

\[
15 = x
\]

Your Turn

a. Determine whether the triangles are similar. If so, tell which similarity test is used and complete the statement.

\[ \triangle DGH \sim \triangle \, ? \]

b. Find the values of \( x \) and \( y \) if the triangles are similar.
Similar triangles can be used to find the length of an object that is difficult to measure directly.

Editon is landscaping a yard. To see how well a tree shades an area of the yard, he needs to know the tree’s height. The tree’s shadow is 18 feet long at the same time that Editon’s shadow is 4 feet long. If Editon is 6 feet tall, how tall is the tree?

Draw a diagram. The rays of the sun form congruent angles with the ground. Both Editon and the tree form right angles with the ground. Therefore, the triangles in the diagram are similar by AA Similarity. Use the similar triangles to find the height of the tree.

\[
\frac{\text{Editon’s height}}{\text{tree’s height}} = \frac{\text{Editon’s shadow}}{\text{tree’s shadow}}
\]

\[
\frac{6}{t} = \frac{4}{18}
\]

\[
6(18) = t(4)
\]

Cross Products

\[
108 = 4t
\]

\[
\frac{108}{4} = \frac{4t}{4}
\]

Divide each side by 4.

\[
27 = t
\]

The tree is 27 feet tall.

Check for Understanding

1. Sketch and label two similar right triangles \(ABC\) and \(DEF\) with right angles at \(C\) and \(F\). Let the measures of angles \(A\) and \(D\) be 30. Name the corresponding sides that are proportional.

2. Refer to Example 2.
   a. If the sides of \(\triangle XWT\) form a Pythagorean triple, what is true about the sides of \(\triangle QRN\)?
   b. Why is this true?

3. Determine whether the triangles are similar. If so, tell which similarity test is used and complete the statement. (Example 1)

4. Find the values of \(x\) and \(y\). (Example 2)
5. **Surveying** Syreeta Coleman is a surveyor. To find the distance across Muddy Pond, she forms similar triangles and measures distances as shown at the right. What is the distance across Muddy Pond? *(Example 3)*

**Exercises**

**Practice**

Determine whether each pair of triangles is similar. If so, tell which similarity test is used and complete the statement.

6. \( \triangle RST \sim \triangle \)?

7. \( \triangle XYZ \sim \triangle \)?

8. \( \triangle MNQ \sim \triangle ? \)

Find the value of each variable.

9. \[ \begin{array}{c}
\triangle & 9 & 15 \\
18 & 20 & \end{array} \]

10. \[ \begin{array}{c}
\triangle & x & y \\
18 & 2 & 5 \\
x & 24 & \end{array} \]

11. \[ \begin{array}{c}
\triangle & 6 & 7 \\
4 & 2 & y \\
10 & x & \end{array} \]

**Give a reason for each statement in Exercises 12–13.**

12. If \( \angle B \cong \angle E \) and \( \angle A \) and \( \angle D \) are right angles, show that \( \frac{BC}{EC} = \frac{AB}{DE} \).

13. If \( JK \parallel GH \), show that \( \frac{FJ}{FG} = \frac{FK}{FH} \).

a. \( \angle B \cong \angle E \)

b. \( \angle A \) and \( \angle D \) are right angles.

c. \( \angle A \cong \angle D \)

d. \( \triangle ABC \sim \triangle DEC \)

e. \( \frac{BC}{EC} = \frac{AB}{DE} \)

a. \( JK \parallel GH \)

b. \( \angle 1 \cong \angle 2 \)

c. \( \angle F \cong \angle F \)

d. \( \triangle FJK \sim \triangle FGH \)

e. \( \frac{FJ}{FG} = \frac{FK}{FH} \)
14. **Road Construction** The state highway department is considering the possibility of building a tunnel through the mountain from point A to point B. Surveyors provided the map at the right. How long would the tunnel be?

15. **Construction** The pitch of a roof is the ratio of the rise to the run. The Ace Construction Company is building a garage that is 24 feet wide. If the pitch of the roof is to be 1:3, find the rise of the roof.

16. **Architecture** Maria is visiting Washington, D.C. She wants to know the height of the Washington Monument. The monument’s shadow is 111 feet at the same time that Maria’s shadow is 1 foot. Maria is 5 feet tall.
   a. Draw a figure to represent the problem. Label all known distances.
   b. Outline two similar triangles in red.
   c. Determine the height of the Washington Monument.

17. **Critical Thinking** Are \( \triangle JKP \) and \( \triangle MNP \) similar? Explain your reasoning.

**Mixed Review**

18. **Scale Drawings** A window measures 8 feet by 3 feet. Make a scale drawing of the window if \( \frac{1}{4} \) inch represents 1 foot. (Lesson 9–2)

19. Write the ratio 10 months to 5 years in simplest form. (Lesson 9–1)

20. Find \( x \) in the figure shown. (Lesson 8–1)

21. **Short Response** In \( \triangle ACE \), \( \overline{AC} \cong \overline{AE} \).
   If \( m\angle C = 7x + 2 \), and \( m\angle E = 8x - 8 \), what is \( m\angle C \) and \( m\angle E \)? (Lesson 6–4)

22. **Multiple Choice** 4 is what percent of 20? (Percent Review)
   A 16%  B 18%  C 20%  D 22%
In \( \triangle PQR \), \( ST \parallel QR \), and \( ST \) intersects the other two sides of \( \triangle PQR \). Note the shape of \( \triangle PST \). Are \( \triangle PQR \) and \( \triangle PST \) similar?

Since \( \angle 1 \) and \( \angle 2 \) are congruent corresponding angles and \( \angle P \equiv \angle P \), \( \triangle PST \sim \triangle PQR \). Why?

By Postulate 9–1, if two angles are congruent, then the two triangles are similar.

This characteristic of a line parallel to a side of a triangle is expressed in Theorem 9–4.

**Theorem 9–4**

**Words:** If a line is parallel to one side of a triangle and intersects the other two sides, then the triangle formed is similar to the original triangle.

**Model:**

![Diagram](image.png)

**Symbols:** If \( BC \parallel DE \), then \( \triangle ABC \sim \triangle ADE \).

You can use Theorem 9–4 to write proportions.

**Example 1**

Complete the proportion \( \frac{SV}{SR} = \frac{?}{RT} \).

Since \( VW \parallel RT \), \( \triangle SVW \sim \triangle SRT \).

Therefore, \( \frac{SV}{SR} = \frac{VW}{RT} \).

**Your Turn**

**a.** Use the triangle above to complete the proportion \( \frac{ST}{SW} = \frac{SR}{?} \).
You can use proportions to solve for missing measures in triangles.

Example

In the figure, \( JK \parallel GH \). Find the value of \( x \).

Explore

You are given a triangle with a line parallel to one side of the triangle. You need to find the measure of \( FG \).

Plan

You know \( \triangle FJK \sim \triangle FGH \) by Theorem 9–4. Use this information to write a proportion and solve for \( x \).

Solve

\[
\frac{FK}{FH} = \frac{FJ}{FG}
\]

Definition of Similar Polygons

\[
\frac{6}{9} = \frac{8}{x}
\]

\( FK = 6, FH = 6 + 3 \text{ or } 9, FJ = 8, FG = x \)

Cross Products

\[
6x = 72
\]

\[
\frac{6x}{6} = \frac{72}{6}
\]

Divide each side by 6.

\[
x = 12
\]

Examine

Check the proportion by substituting 12 for \( x \).

\[
\frac{6}{9} \neq \frac{8}{12}
\]

Substitution

\[
6(12) \neq 9(8)
\]

Cross Products

\[
72 = 72
\]

√

Your Turn

b. In the figure, \( \overline{AB} \parallel \overline{PR} \).

Find the value of \( x \).

What other relationship occurs when a line is parallel to one side of a triangle and intersects the other two sides?
Materials: lined paper  protractor  ruler

Step 1  On a piece of lined paper, pick a point on one of the lines and label it $A$. Use a straightedge and protractor to draw $\angle A$ so that $m\angle A < 90$ and only the vertex lies on the line.

Step 2  Extend one side of $\angle A$ down six lines. Label this point $G$. Do the same for the other side of $\angle A$. Label this point $M$. Now connect points $G$ and $M$ to form $\triangle AGM$.

Step 3  Label the points where the horizontal rules intersect $\overline{AG}$, $B$ through $F$, as shown. Label those points where the horizontal rules intersect $\overline{AM}$, $H$ through $L$.

Try These
1. Measure $\overline{AC}$, $\overline{CG}$, $\overline{AD}$, $\overline{DG}$, $\overline{AE}$, $\overline{EG}$, $\overline{AI}$, $\overline{IM}$, $\overline{AJ}$, $\overline{JM}$, $\overline{AK}$, and $\overline{KM}$.
2. Calculate and compare the following ratios.
   a. $\frac{AC}{CG}$ and $\frac{AI}{IM}$
   b. $\frac{AD}{DG}$ and $\frac{AJ}{JM}$
   c. $\frac{AE}{EG}$ and $\frac{AK}{KM}$
3. What can you conclude about the lines through the sides of $\triangle AGM$ and parallel to $\overline{GM}$?

The activity above suggests Theorem 9–5.

Theorem 9–5
Words: If a line is parallel to one side of a triangle and intersects the other two sides, then it separates the sides into segments of proportional lengths.

Model: $\triangle ABC$ with $\overline{DE}$ parallel to $\overline{BC}$

Symbols: If $\overline{BC} \parallel \overline{DE}$, then $\frac{AB}{BD} = \frac{AC}{CE}$.
You can use a TI–92 graphing calculator to verify Theorem 9–5.

**Graphing Calculator Exploration**

**Step 1** Select the Triangle tool on [F3]. Draw and label triangle $DAE$.

**Step 2** Next, use the Point on Object tool on [F2] to draw a point between $D$ and $A$ on side $DA$. Label the point $B$.

**Step 3** Use the Parallel Line tool on [F4] to draw a line through $B$ parallel to side $DE$.

**Step 4** Use the Intersection Point tool on [F2] to mark the point where the line intersects side $EA$. Label the point $C$. You now have a figure that you can use to verify Theorem 9–5.

**Try These**

1. Use the Distance & Length tool on [F6] to find the length of $AB$, $BD$, $AC$, and $CE$.

2. Use the Calculate tool on [F6] to calculate the value of $AB \div BD$ and $AC \div CE$. What can you say about these values?

3. Describe what happens to the segment lengths from Exercise 1 and the ratios from Exercise 2 when you drag point $B$ closer to $A$.

**Example**

In the figure, $RS \parallel UW$. Find the value of $x$.

$$\frac{VR}{RU} = \frac{VS}{SW}$$

$4 \times \frac{x}{x+2} = \frac{5}{x}$

$(4x + 8) = 5x(5)$

$4x + 8 = 5x$

$4x + 8 - 4x = 5x - 4x$

$8 = x$

**Theorem 9–5**

$VR = 4$, $RU = x$, $VS = 5$, $SW = x + 2$

$Cross Products$

$Distributive Property$

$Subtract 4x from each side.$

**Your Turn**

**3.** In the figure, $GH \parallel BC$. Find the value of $x$.
Check for Understanding

Communicating Mathematics

1. **Explain** why \( \triangle NRT \sim \triangle NPM \).

2. **Write** four proportions for the figure.

3. **You Decide** Casey uses the proportion \( \frac{5}{6} = \frac{x}{8} \) to solve for \( x \) in the figure.

   Jacob says she should use the proportion \( \frac{5}{11} = \frac{x}{8} \).

   Who is correct? Explain your reasoning.

Guided Practice

**Complete each proportion.**  
(Example 1)

4. \( \frac{NQ}{RP} = \frac{?}{SR} \)

   D  6
Jodie Rudberg is a carpenter. She is building the framework for a roof. How can she be sure the collar tie is parallel to the joist?

You know that if a line is parallel to one side of a triangle and intersects the other two sides, then it separates the sides into segments of proportional lengths (Theorem 9–5). The converse of this theorem is also true.

Determine whether $TU \parallel RS$.

First, find $TV$.

$$RT + TV = RV$$
$$5 + TV = 15$$
Replace $RT$ with 5 and $RV$ with 15.

$$5 + TV - 5 = 15 - 5$$
Subtract 5 from each side.

$$TV = 10$$

Then, determine whether $\frac{RT}{TV}$ and $\frac{SU}{UV}$ form a proportion.

$$\frac{RT}{TV} = \frac{SU}{UV}$$

$$\frac{5}{10} \neq \frac{4}{8}$$
$RT = 5$, $TV = 10$, $SU = 4$, and $UV = 8$

$5(8) \neq 10(4)$
Cross Products

$40 = 40$ \checkmark

Using Theorem 9–6, $TU \parallel RS$. 

**Example 1**
In each figure, determine whether $MN \parallel KL$.

a. 

Consider the special case at the right. $S$ is the midpoint of $PQ$ and $T$ is the midpoint of $PR$. Because $\frac{5}{5} = \frac{7}{7}$, $ST \parallel QR$ by Theorem 9–6. Therefore, $\triangle PST \sim \triangle PQR$ by Theorem 9–4. Using the definition of similar polygons, 

$$\frac{ST}{QR} = \frac{PS}{PQ}$$

But $\frac{PS}{PQ} = \frac{5}{10}$ so $\frac{ST}{QR} = \frac{5}{10}$ or $\frac{1}{2}$.

The general conclusion is stated in Theorem 9–7.

Segment $DE$ is called the midsegment of the triangle because its endpoints are the midpoints of two sides of the triangle.

**Theorem 9–7**

**Words:** If a segment joins the midpoints of two sides of a triangle, then it is parallel to the third side, and its measure equals one-half the measure of the third side.

**Model:**

$D$ is the midpoint of $AB$ and $E$ is the midpoint of $AC$, then $DE \parallel BC$ and $DE = \frac{1}{2}BC$.

**Symbols:**

$x, y, and z$ are midpoints of the sides of $\triangle UVW$. Complete each statement.

If $VW = 6a$, then $XY = \_\_\_\_\_\_\_\_\_\_\_\_\_\_\_\_\_\_\_.

$XY = \frac{1}{2}VW$ Theorem 9–7

$XY = \frac{1}{2}(6a)$ Replace $VW$ with $6a$.

$XY = 3a$.

If $VW = 6a$, then $XY = 3a$.

(continued on the next page)
If \( m \angle WZY = 2b + 1 \), then \( m \angle WVU = \_ _ _ ? \_ _. 

By Theorem 9–6, \( \overline{YZ} \parallel \overline{UV} \). Since \( \overline{YZ} \) and \( \overline{UV} \) are parallel segments cut by transversal \( \overline{WV} \), \( \angle WZY \) and \( \angle WVU \) are congruent corresponding angles.

If \( m \angle WZY = 2b + 1 \), then \( m \angle WVU = 2b + 1 \).

**Your Turn**

c. \( XZ \parallel \_ _ _ ? _ _ \)

d. If \( YZ = c \), then \( UV = \_ _ _ ? \_ _. \)

### Check for Understanding

#### Communicating Mathematics

1. Describe how Ms. Rudberg can determine if the collar tie is parallel to the joist in the application at the beginning of the lesson.

2. Draw a triangle. Find the midpoints of two sides of the triangle and draw a segment between the two midpoints. Measure this segment and the third side of the triangle. Which theorem is confirmed?

### Guided Practice

In each figure, determine whether \( \overline{GH} \parallel \overline{EF} \).  

(Example 1)

3. \[ F \]

4. \[ E \]

A, B, and C are the midpoints of the sides of \( \triangle MNP \). Complete each statement.

A 3  B \( \frac{1}{3} \)  C –2  D 2
Carpenter

Did you know that carpenters make up the largest group of skilled workers employed in the building trades? Carpenters cut, fit, and assemble wood and other materials in the construction of structures such as houses, buildings, and highways.

When constructing houses, carpenters use trusses to frame the roof. There are many types of trusses. One type, the *scissors truss*, is shown below.

![Scissors truss diagram]

1. Determine whether $XY \parallel BC$. Explain your reasoning.
2. Complete the following: $\triangle AXY \sim \triangle$ ____.

**FAST FACTS About Carpenters**

**Working Conditions**
- generally work outdoors
- work may be strenuous
- can change employers each time a job is completed
- may risk injury from slips or falls, working with rough materials, and using tools and power equipment

**Employment**

**Where Carpenters Are Employed, 2000**

- **General Building Carpenters** 33%
- **Special Trade Carpenters** 20%
- **Heavy Construction** 12%
- **Government Agencies** 7%
- **Schools** 5%
- **Manufacturing firms** 5%
- **Wholesale/Retail Store** 35%

**Source:** Occupational Outlook Handbook

Ratios of a Special Triangle

You may have heard of the golden rectangle, whose sides have a special ratio called the golden ratio. The golden ratio is approximately 1.618 to 1 or about 1.618. Artists and architects often use the golden rectangle because it is pleasing to the eye. A look at the Parthenon in Greece, the Taj Mahal in India, or the Lincoln Memorial in Washington, D.C., will reveal uses of the golden rectangle in architecture.

Do you think there are golden triangles? How would they be constructed? Let’s find out.

Investigate

1. Construct a golden triangle.
   a. Trace the regular pentagon below and use a photocopier to enlarge it. Draw $\overline{AC}$ and $\overline{AD}$.
b. Use a protractor to find the measures of the angles of $\triangle ADC$. Classify $\triangle ADC$.

c. Find the ratio of $AD$ to $DC$. How does this ratio compare to the golden ratio?

Artists often use golden triangles to draw your eye toward the face of the subject. Notice how the folded arms and head of the *Mona Lisa* form a triangle.

2. Use your pentagon and triangle to construct another golden triangle. Follow the steps below.

   a. Using a compass and straightedge, bisect $\angle ADC$. Label the point where the angle bisector intersects $AC$ point $F$.

   b. What are the measures of the angles in $\triangle DCF$? Classify $\triangle DCF$.

   c. Find the ratio of $DC$ to $FC$. How does this ratio compare to the golden ratio?

   d. What conclusions can you draw from this activity?

In this extension, you will investigate the golden ratio, golden triangles, and golden rectangles.

- Start with a regular pentagon. Draw at least four golden triangles, each one smaller than the previous one. Label the triangles and show the golden ratio in each triangle. You may want to use different colors to outline the different triangles.

- Are the golden triangles you drew within the pentagon similar? Explain.

**Presenting Your Conclusions**

Here are some ideas to help you present your conclusions to the class.

- Make a bulletin board to display your golden triangles.

- Research the golden ratio. Write a brief paper describing five examples where the golden ratio has been used.

- Research the golden rectangle. Make a poster demonstrating how to construct a golden rectangle.
The artistic concept of perspective combines proportion and the properties of parallel lines.

In the figure, points $A$ and $B$ lie on the horizon. $AC$ and $BD$ represent two lines extending from the horizon to the foreground. The two lines also form transversals for the parallel lines $m$, $n$, and $p$.

Along the transversals $AC$ and $BD$, the parallel lines cut segments of different lengths. Is there a relationship between the lengths of the segments?

The following activity investigates transversals that cross three parallel lines.

**Materials:** lined paper, ruler

**Step 1** Draw a dark line over the line at the top of your lined paper. Count down four lines and draw a dark line over that line. Count down six more lines and draw a dark line over that line.

**Step 2** Draw three different transversals that cross each of the parallel lines you drew. Label the points of intersection as shown.

**Try These**

1. Measure $AB$, $BC$, $AC$, $DE$, $EF$, $DF$, $GH$, $HI$, and $GI$.
2. Calculate each set of ratios. Determine whether the ratios in each set are equivalent to each other.
   a. $\frac{AB}{AC} \quad \frac{DE}{EF} \quad \frac{GH}{HI}$
   b. $\frac{AB}{AC'} \quad \frac{DE}{DF'} \quad \frac{GH}{GI}$
   c. $\frac{BC}{AC'} \quad \frac{EF}{DF'} \quad \frac{HI}{GI}$
3. Do the parallel lines divide the transversals proportionally?
The previous activity suggests Theorem 9–8.

**Theorem 9–8**

**Words:** If three or more parallel lines intersect two transversals, the lines divide the transversals proportionally.

**Model:**

\[ \frac{AB}{BC} = \frac{DE}{EF}, \quad \frac{AB}{AC} = \frac{DE}{DF}, \text{ and } \frac{BC}{AC} = \frac{EF}{DF}. \]

**Symbols:** If \( \ell \parallel m \parallel n \), then \( \frac{AB}{BC} = \frac{DE}{EF} \) and \( \frac{BC}{AC} = \frac{EF}{DF} \).

---

**Example**

1. Complete the proportion \( \frac{MN}{MP} = \frac{?}{RT} \).

Since \( MR \parallel NS \parallel PT \), the transversals are divided proportionally. Therefore, \( \frac{MN}{MP} = \frac{RS}{RT} \).

**Your Turn**

a. Use the figure above to complete the proportion \( \frac{RS}{ST} = \frac{MN}{?} \).

You can use proportions from parallel lines to solve for missing measures.

---

**Example**

2. In the figure, \( a \parallel b \parallel c \). Find the value of \( x \).

\[
\frac{GH}{HJ} = \frac{UV}{VW} \\
\frac{12}{18} = \frac{15}{x} \\
12x = 270 \\
x = \frac{45}{2} \text{ or } 22 \frac{1}{2}
\]

(continued on the next page)
Suppose three parallel lines intersect a transversal and divide the transversal into congruent segments. Refer to the figure below. The transversal on the left is divided into congruent segments. Is this true of the other two transversals? Find the values of $x$ and $y$.

\[
\begin{align*}
\frac{5}{5} &= \frac{4}{x} \\
5x &= 20 \\
\frac{5x}{5} &= \frac{20}{5} \\
x &= 4
\end{align*}
\]

These results suggest Theorem 9–9.

**Theorem 9–9**

**Words:** If three or more parallel lines cut off congruent segments on one transversal, then they cut off congruent segments on every transversal.

**Model:**

\[
\begin{align*}
A & \quad D \\
B & \quad E \\
C & \quad F \\
\ell & \quad m \\
\end{align*}
\]

**Symbols:** If $\ell \parallel m \parallel n$ and $AB \cong BC$, then $DE \cong EF$.

---

**Check for Understanding**

**Communicating Mathematics**

1. Write at least three proportions if $a \parallel b \parallel c$.

2. Describe how you would find $GJ$ if $EF = 15$, $DF = 25$, and $GH = 12$. 

**Exercises 1–2**

---

**Your Turn**

b. In the figure, $\ell \parallel m \parallel n$.

Find the value of $x$. 

\[
\begin{align*}
\frac{5}{5} &= \frac{4}{x} \\
5x &= 20 \\
\frac{5x}{5} &= \frac{20}{5} \\
x &= 4
\end{align*}
\]
3. **Draw** a segment and label the endpoints \(A\) and \(B\). Use the following steps to divide \(AB\) into three congruent segments.

   a. **Draw** \(AC\) so that \(\angle BAC\) is an acute angle.

   b. With a compass, start at \(A\) and mark off three congruent segments on \(AC\). Label these points \(D\), \(E\), and \(F\).

   c. **Draw** \(BF\).

   d. Construct lines through \(D\) and \(E\) that are parallel to \(BF\). These parallel lines will divide \(AB\) into three congruent segments.

   e. **Explain** why this construction works.

**Guided Practice**

**Complete each proportion.** *(Example 1)*

4. \[
\frac{NP}{MP} = \frac{?}{RT}
\]

5. \[
\frac{ST}{?} = \frac{NP}{MN}
\]

**Find the value of \(x\).** *(Example 2)*

6. \[
\begin{align*}
6 & \quad 4 \\
x & \quad 12
\end{align*}
\]

7. \[
\begin{align*}
x + 1 & \quad 6 \\
2 & \quad 4
\end{align*}
\]

8. **Travel** Alex is visiting the city of Melbourne, Australia. Elizabeth Street, Swanston Street, Russell Street, and Exhibition Street are parallel. If Alex wants to walk along La Trobe Street from Elizabeth Street to Exhibition Street, approximately how far will he walk? *(Example 2)*
Complete each proportion.

9. \( \frac{DF}{FB} = \frac{?}{CE} \)

10. \( \frac{?}{DF} = \frac{CE}{AC} \)

11. \( \frac{AC}{?} = \frac{DF}{DB} \)

12. \( \frac{AC}{AE} = \frac{DF}{?} \)

13. \( \frac{?}{FB} = \frac{AE}{CE} \)

14. \( \frac{AE}{?} = \frac{DB}{DF} \)

Find the value of \( x \).

15. \( x = 9 \) & \( x = 12 \)

16. \( x = 10 \) & \( x = 4 \)

17. \( x = 8 \) & \( x = 10 \)

18. \( x = 12 \) & \( x = 8 \)

19. \( x = 3 \) & \( x = 4 \)

20. \( x = 2 \) & \( x = 3 \)

21. If \( RT = 12 \), \( WV = 5 \), and \( WU = 13 \), find \( RS \).

22. If \( RT = 20 \), \( ST = 15 \), and \( WU = 12 \), find \( VU \).

23. **City Planning** Numbered streets in Washington, D.C., run north and south. Lettered name streets run east and west. Other streets radiate out like spokes of a wheel and are named for states. The Metro subway system goes under some of the roads. Find the approximate distance between the two Metro stations indicated on the map by M.
24. **Real Estate**  
Hometown Builders are selling four building sites along Washburn River. If the total river frontage of the lots is 100 meters, find the river frontage for each lot.

25. **Critical Thinking**  
Exercise 3 on page 385 describes a construction that divides a segment into three congruent segments. Draw a line segment and describe how to divide it into three segments with the ratio 1:2:3. Then construct the divided segment.

**Mixed Review**

26. Triangle $CDE$ is shown. Determine whether $DC \parallel MN$.  
*(Lesson 9–5)*

27. Use $\triangle XYZ$ to complete the proportion $\frac{YX}{YA} = \frac{YZ}{?}$.  
*(Lesson 9–4)*

28. Is a triangle with measures 18, 24, and 30 a right triangle?  
*(Lesson 6–6)*

29. **Grid In**  
$\overline{AC}$ and $\overline{AT}$ are opposite rays and $\overline{AR} \perp \overline{AS}$. If $m\angle CAR = 42$, find $m\angle SAT$.  
*(Lesson 3–7)*

30. **Short Response**  
Draw and label a rectangle that has an area of 42 square centimeters.  
*(Lesson 1–6)*

---

**Quiz 2**  
**Lessons 9–3 through 9–6**

Find the value of each variable.  
*(Lessons 9–3, 9–4, 9–5, and 9–6)*

1. 2. 3. 4.

5. Carl is 6 feet tall and casts an 8-foot shadow. At the same time, a flagpole casts a 48-foot shadow. How tall is the flagpole?  
*(Lesson 9–3)*
If two triangles are similar, then the measures of their corresponding sides are proportional. Is there a relationship between the measures of the perimeters of the two triangles?

Materials: grid paper

Step 1 On grid paper, draw right triangle $ABC$ with legs 9 units and 12 units long as shown.

Step 2 On grid paper, draw right triangle $DEF$ with legs 6 units and 8 units long as shown.

Try These

1. Use the Pythagorean Theorem to find $AB$ and $DE$.
2. Find the ratios $\frac{AB}{DE}$, $\frac{BC}{EF}$, and $\frac{CA}{FD}$.
3. Are the triangles similar? Explain.
4. Find the perimeters of $\triangle ABC$ and $\triangle DEF$.
5. Find the ratio $\frac{\text{perimeter of } \triangle ABC}{\text{perimeter of } \triangle DEF}$.
6. Compare the ratios $\frac{\text{perimeter of } \triangle ABC}{\text{perimeter of } \triangle DEF}$ and $\frac{AB}{DE} = \frac{BC}{EF} = \frac{CA}{FD}$. Describe your results.

The activity above suggests Theorem 9–10.

Theorem 9–10

Words: If two triangles are similar, then the measures of the corresponding perimeters are proportional to the measures of the corresponding sides.

Symbols: If $\triangle ABC \sim \triangle DEF$, then

$$\frac{\text{perimeter of } \triangle ABC}{\text{perimeter of } \triangle DEF} = \frac{AB}{DE} = \frac{BC}{EF} = \frac{CA}{FD}.$$
You can find the measures of all three sides of a triangle when you know the perimeter of the triangle and the measures of the sides of a similar triangle.

The perimeter of \( \triangle RST \) is 9 units, and \( \triangle MNP \sim \triangle RST \). Find the value of each variable.

The perimeter of \( \triangle MNP \) is 3 \times 6 or 13.5.  
\[
3(9) = x(13.5) \quad \text{Cross Products}
\]
\[
27 = 13.5x \quad \text{Divide each side by 13.5.}
\]
\[
x = \frac{27}{13.5} = 2
\]

Because the triangles are similar, two other proportions can be written to find the value of the other two variables.

\[
\frac{MN}{RS} = \frac{NP}{ST} \quad \text{Definition of Similar Polygons}
\]
\[
\frac{3}{x} = \frac{13.5}{9} \quad \text{The perimeter of } \triangle MNP \text{ is } 3 + 6 + 4.5 \text{ or } 13.5.
\]
\[
x = \frac{13.5 \times 9}{3} = 27 = 13.5x
\]
\[
x = \frac{27}{13.5} = 2
\]

\[
\frac{3y}{z} = \frac{12}{3} \quad \text{Divide each side by 3.}
\]
\[
y = \frac{12}{3} = 4
\]
\[
z = \frac{9}{3} = 3
\]

Your Turn

a. The perimeter of \( \triangle KQV \) is 72 units, and \( \triangle GHJ \sim \triangle KQV \). Find the value of each variable.

The ratio found by comparing the measures of corresponding sides of similar triangles is called the constant of proportionality or the scale factor.

If \( \triangle ABC \sim \triangle DEF \), then \( \frac{AB}{DE} = \frac{BC}{EF} = \frac{CA}{FD} \).

or \( \frac{3}{6} = \frac{7}{14} = \frac{5}{10} \). Each ratio is equivalent to \( \frac{1}{2} \).

The scale factor of \( \triangle ABC \) to \( \triangle DEF \) is \( \frac{1}{2} \).

The scale factor of \( \triangle DEF \) to \( \triangle ABC \) is \( \frac{2}{1} \).

www.geomconcepts.com/extra_examples
Example 2

Determine the scale factor of $\triangle UVW$ to $\triangle XYZ$.

\[
\frac{UV}{XY} = \frac{10}{6} \text{ or } \frac{5}{3}
\]

\[
\frac{VW}{YZ} = \frac{15}{9} \text{ or } \frac{5}{3}
\]

\[
\frac{WU}{ZX} = \frac{20}{12} \text{ or } \frac{5}{3}
\]

The scale factor is $\frac{5}{3}$.

Your Turn

b. Determine the scale factor of $\triangle XYZ$ to $\triangle UVW$.

In the figure, $\triangle ABC \sim \triangle DEF$. Suppose the scale factor of $\triangle ABC$ to $\triangle DEF$ is $\frac{1}{2}$.

\[
\frac{P \text{ of } \triangle ABC}{P \text{ of } \triangle DEF} = \frac{1}{2}
\]

(P of $\triangle ABC$) = $\frac{1}{2}$ (P of $\triangle DEF$) Multiply each side by P of $\triangle DEF$.

\[
P \text{ of } \triangle ABC = \frac{1}{2} (P \text{ of } \triangle DEF)
\]

In general, if the scale factor of $\triangle ABC$ to $\triangle DEF$ is $s$, $P$ of $\triangle ABC = s(P$ of $\triangle DEF)$.

Example 3

Suppose $\triangle SLC \sim \triangle GFR$ and the scale factor of $\triangle SLC$ to $\triangle GFR$ is $\frac{2}{3}$. Find the perimeter of $\triangle GFR$ if the perimeter of $\triangle SLC$ is 14 inches.

\[
\frac{\triangle SLC}{\triangle GFR} = \frac{2}{3} = \frac{14}{x}
\]

Perimeter of $\triangle SLC$ Perimeter of $\triangle GFR$

$2x = 42$ Find cross products.

$\frac{2x}{2} = \frac{42}{2}$ Divide each side by 2.

$x = 21$

The perimeter of $\triangle GFR$ is 21 inches.

Your Turn

c. Suppose $\triangle PQR \sim \triangle XYZ$ and the scale factor of $\triangle PQR$ to $\triangle XYZ$ is $\frac{5}{6}$. Find the perimeter of $\triangle XYZ$ if the perimeter of $\triangle PQR$ is 25 centimeters.
Check for Understanding

Communicating Mathematics

1. **Confirm** that the ratio of the measures of the corresponding sides is the same as the ratio of the measures of the corresponding perimeters.

![Diagram of triangles]

2. **Identify** the additional information needed to solve for $x$.

$\triangle TRS \sim \triangle PQR$

perimeter of $\triangle TRS = 20$

$QO = 15$

Guided Practice

Write each fraction in simplest form.

**Sample:** $\frac{18}{21}$

**Solution:** $\frac{18}{21} = \frac{18 \div 3}{21 \div 3} = \frac{6}{7}$

3. $\frac{6}{42}$
4. $\frac{10}{24}$
5. $\frac{63}{18}$
6. $\frac{91}{13}$

For each pair of similar triangles, find the value of each variable.

*(Example 1)*

7. $\triangle ABC$ with $P = 9$

8. $\triangle JKL$ with $P = 7.5$

Determine the scale factor for each pair of similar triangles.

*(Example 2)*

9. $\triangle MNO$ to $\triangle XYZ$

10. $\triangle XYZ$ to $\triangle MNO$
11. Suppose \( \triangle RST \sim \triangle UVW \) and the scale factor of \( \triangle RST \) to \( \triangle UVW \) is \( \frac{3}{2} \). Find the perimeter of \( \triangle UVW \) if the perimeter of \( \triangle RST \) is 57 inches. (Example 3)

12. Surveying Heather is using similar triangles to find the distance across Turtle Lake. What is the scale factor of \( \triangle BCD \) to \( \triangle ACE \)? (Example 2)

Exercises

For each pair of similar triangles, find the value of each variable.

13. \( P \) of \( \triangle DEF = 29 \)

14. \( P \) of \( \triangle GHI = 21 \)

15. \( P \) of \( \triangle PQR = 36 \)

16. \( P \) of \( \triangle STU = 30 \)

17. \( P \) of \( \triangle BCD = 81 \)

18. \( P \) of \( \triangle MNJ = 44 \)

Determine the scale factor for each pair of similar triangles.

19. \( \triangle STU \) to \( \triangle PQR \)

20. \( \triangle PQR \) to \( \triangle STU \)

21. \( \triangle GHI \) to \( \triangle JKL \)

22. \( \triangle JKL \) to \( \triangle GHI \)

23. \( \triangle XYZ \) to \( \triangle MNO \)

24. \( \triangle MNO \) to \( \triangle XYZ \)

25. The perimeter of \( \triangle RST \) is 57 feet. If \( \triangle RST \sim \triangle HKN \) and the scale factor of \( \triangle RST \) to \( \triangle HKN \) is \( \frac{3}{2} \), find the perimeter of \( \triangle HKN \).

26. Suppose \( \triangle JKL \sim \triangle MVW \) and the scale factor of \( \triangle JKL \) to \( \triangle MVW \) is \( \frac{4}{3} \). The lengths of the sides of \( \triangle JLK \) are 12 meters, 10 meters, and 10 meters. Find the perimeter of \( \triangle MVW \).
27. Suppose \( \triangle ABC \sim \triangle DEF \) and the scale factor of \( \triangle ABC \) to \( \triangle DEF \) is \( \frac{5}{3} \). Find the perimeter of \( \triangle DEF \) if the perimeter of \( \triangle ABC \) is 25 meters.

28. **Drafting** In a blueprint of a house, 1 inch represents 3 feet. What is the scale factor of the blueprint to the actual house? *(Hint: Change feet to inches.)*

29. **Architecture** A bird’s-eye view of the Pentagon reveals five similar pentagons. Each side of the outside pentagon is about 920 feet. Each side of the innermost pentagon is about 360 feet.
   a. Find the scale factor of the outside pentagon to the innermost pentagon.
   b. Find the perimeter of the outside pentagon.
   c. Find the perimeter of the innermost pentagon.
   d. Find the ratio of the perimeter of the outside pentagon to the perimeter of the innermost pentagon.
   e. Tell how the ratio in part d compares to the scale factor of the pentagons.

30. **Critical Thinking** The perimeter of \( \triangle RST \) is 40 feet. Find the perimeter of \( \triangle XYZ \).

31. In the figure shown, \( \ell \parallel m \parallel n \). Find the value of \( x \). *(Lesson 9–6)*

32. **Algebra** The midpoints of the sides of \( \triangle ABC \) are \( E, F, \) and \( G \). Find the measure of \( BC \) if \( EG = 4b \). *(Lesson 9–5)*

33. True or false: The diagonals of a square bisect each other. *(Lesson 8–4)*

34. If \( MN = 47 \), \( PQ = 63 - 4c \), and \( MN \leq PQ \), what is the value of \( c \)? *(Lesson 7–1)*

35. **Short Response** Suppose \( AB = AD = 4 \), \( m\angle B = m\angle D = 65 \), and \( AC = 3.5 \). Is \( \triangle ABC \cong \triangle ADC \)? *(Lesson 5–5)*

36. **Multiple Choice** In \( \triangle RST \), \( m\angle R = 72 \) and \( m\angle S = 37 \). What is \( m\angle T \)? *(Lesson 5–2)*
   - A 19
   - B 37
   - C 71
   - D 72

**Applications and Problem Solving**

**Mixed Review**

**Standardized Test Practice**

[www.geomconcepts.com/self_check_quiz](http://www.geomconcepts.com/self_check_quiz)
Understanding and Using the Vocabulary

After completing this chapter, you should be able to define each term, property, or phrase and give an example or two of each.

- cross products (p. 351)
- extremes (p. 351)
- golden ratio (p. 380)
- means (p. 351)
- polygon (p. 356)
- proportion (p. 351)
- ratio (p. 350)
- scale drawing (p. 358)
- scale factor (p. 389)
- sides (p. 356)
- similar polygons (p. 356)

Choose the correct term to complete each sentence.

1. Every proportion has two (similar figures, cross products).
2. A (proportion, ratio) is a comparison of two numbers by division.
3. The cross products are always equal in a (proportion, scale drawing).
4. In (proportions, similar figures), corresponding angles are congruent, and the measures of corresponding sides have equivalent ratios.
5. In the proportion \( \frac{2}{5} = \frac{4}{10} \), the terms 2 and 10 are called the (extremes, means).
6. (Scale drawings, Proportions) are used to represent something that is too large or too small to be drawn at actual size.
7. A proportion has two cross products called the extremes and the (ratios, means).
8. The constant of proportionality is also called the (scale factor, scale drawing).
9. Knowing several measures of two (similar figures, scale drawings) may allow you to find the measures of missing parts.
10. The symbols \( a \) to \( b \), \( a:b \), and \( \frac{a}{b} \), where \( b \neq 0 \) represent (ratios, cross products).

Skills and Concepts

Objectives and Examples

- Lesson 9–1 Use ratios and proportions to solve problems.

Solve \( \frac{6}{45} = \frac{2}{3x} \).

\[
\frac{6}{45} = \frac{2}{3x} \\
6(3x) = 45(2) \\
18x = 90 \\
\frac{18x}{18} = \frac{90}{18} \\
x = 5
\]

Write each ratio in simplest form.

11. \( \frac{3}{9} \)  
12. \( \frac{45}{100} \)  
13. \( \frac{55}{22} \)

Solve each proportion.

14. \( \frac{3}{10} = \frac{9}{x} \)  
15. \( \frac{3}{2x} = \frac{12}{16} \)  
16. \( \frac{84}{49} = \frac{12}{17-x} \)  
17. \( \frac{16}{20} = \frac{x + 3}{10} \)

www.geomconcepts.com/vocabulary_review
Objectives and Examples

- **Lesson 9–2** Identify similar polygons.
  Determine whether the polygons are similar.

  \[
  \frac{3}{9} = \frac{4}{12} = \frac{5}{15}, \text{ the sides of the polygons are proportional. The corresponding angles are congruent. So, the polygons are similar.}
  \]

- **Lesson 9–3** Use AA, SSS, and SAS similarity tests for triangles.
  Since \( \angle A \cong \angle X \) and \( \angle B \cong \angle Y \), the triangles are similar by AA Similarity.

- **Lesson 9–4** Identify and use the relationships between proportional parts of triangles.
  Since \( BC \parallel DE \), \( \triangle ABC \sim \triangle ADE \).
  \[
  \frac{AB}{AD} = \frac{BC}{DE}.
  \]

- **Lesson 9–5** Use proportions to determine whether lines are parallel to sides of triangles.
  Determine whether \( LM \parallel JK \).
  \[
  \frac{LJ}{NJ} = \frac{MK}{NK} = \frac{2}{8} = \frac{3}{12}.
  \]
  \[
  2(12) \neq 8(3) \quad \text{Cross Products}
  \]
  \[
  24 = 24 \quad \checkmark
  \]
  So, \( LM \parallel JK \).

Review Exercises

18. Determine whether the polygons are similar. Justify your answer.

19. The polygons are similar. Find \( x \) and \( y \).

20. Determine whether each pair of triangles is similar. If so, tell which similarity test is used.

21. Complete each proportion.

22. \[
  \frac{?}{PQ} = \frac{MN}{MP}
  \]

23. \[
  \frac{ML}{MQ} = \frac{?}{MP}
  \]

24. Determine whether \( AB \parallel CD \).

25. \( AC \parallel ? \)

26. If \( LIT = 16 \), then \( AB = ? \)

27. If \( BC = 6 \), then \( SU = ? \)
Objectives and Examples

- **Lesson 9–6** Identify and use the relationships between parallel lines and proportional parts.

  Since $AD \parallel BE \parallel CF$,
  \[
  \frac{AD}{BC} = \frac{BE}{EF} = \frac{CF}{DF}.
  \]

- **Lesson 9–7** Identify and use proportional relationships of similar triangles.

  Determine the scale factor of $\triangle ABC$ to $\triangle XYZ$.

  \[
  \frac{AB}{XY} = \frac{AC}{XZ} = \frac{BC}{YZ} = \frac{1}{2}
  \]

  The scale factor of $\triangle ABC$ to $\triangle XYZ$ is $\frac{1}{2}$.

Review Exercises

28. Complete the proportion $\frac{AB}{AC} = \frac{?}{DF}$ using the figure at the left.

29. Find the value of $d$ if $x \parallel y \parallel z$.

30. The triangles below are similar, and the perimeter of $\triangle NPQ$ is 27. Find the value of each variable.

31. Determine the scale factor of $\triangle DEF$ to $\triangle ABC$.

Applications and Problem Solving

32. **Sailing** The sail on John’s boat is shaped like a right triangle. Its hypotenuse is 24 feet long, one leg is 16 feet long, and the other is about 18 feet long. The triangular sail on a model of the boat has a hypotenuse of 3 feet. If the two triangular sails are similar, how long are the legs of the model’s sail? *(Lesson 9–3)*

33. **Recreation** The ends of the swing set at Parkdale Elementary School look like the letter A, as shown in the diagram. If the horizontal bar is parallel to the ground, how long is the horizontal bar? *(Lesson 9–5)*
1. Name three tests used to determine whether triangles are similar.

2. Describe how a scale drawing could be used by an architect.

Solve each proportion.

3. \[
\frac{x - 2}{7} = \frac{20}{35}
\]

4. \[
\frac{5}{3} = \frac{x + 7}{9}
\]

5. \[
\frac{27}{x} = \frac{36}{9}
\]

6. Determine if the polygons are similar. Justify your answer.

7. The polygons are similar. Find the values of \(x\) and \(z\).

Determine whether each pair of triangles is similar. If so, tell which similarity test is used.

8. 

9. 

10. 

11. Find the values of \(x\) and \(y\).

Complete each proportion.

12. \[
\frac{BF}{?} = \frac{BE}{BC}
\]

13. \[
\frac{BE}{BC} = \frac{?}{CD}
\]

Complete each statement.

14. \(AC = \_\_\_\_\_\_\_\_\_\_\_\_\_\_\_\_.\)

15. \(BC \parallel \_\_\_\_\_\_\_\_\_\_\_\_\_\_\_\_.\)

16. \(\triangle ABC \sim \_\_\_\_\_\_\_\_\_\_\_\_\_\_\_\_.\)

17. List three proportions, given \(x \parallel y \parallel z\).

18. Find the value of \(n\).

19. A 42-foot tree casts a shadow of 63 feet. How long is the shadow of a 5-foot girl who is standing near it?

20. A puzzle consists of several triangles that are all similar. If the perimeter of \(\triangle ABC\) is 39, find the value of each variable.
Chapter 9

Preparing for Standardized Tests

Ratio and Proportion Problems

Standardized tests almost always include ratio and proportion problems. Remember that ratios can be written in several ways.

\[ a \text{ to } b, a:b, \frac{a}{b}, \text{ or } a \div b, \text{ where } b \neq 0 \]

State Test Example

A grocery store sells oranges at 3 for $1.29. How much do 10 oranges cost?

**Hint** Write prices like 3 for $1.29 as a ratio.

**Solution** Write a proportion. Let one ratio represent the cost of the 3 oranges. Use \( x \) for the cost of 10 oranges. Let the second ratio represent the cost of the 10 oranges. Find the cross products. Solve the equation for \( x \).

\[
\frac{\text{cost of 3 oranges}}{\text{number of oranges}} = \frac{1.29}{3} = \frac{x}{10} \iff \text{cost of 10 oranges} = 3(x)
\]

\[
12.9 = 3x
\]

\[
\frac{12.9}{3} = \frac{3x}{3}
\]

\[
4.3 = x
\]

The cost of 10 oranges is $4.30.

SAT Example

A bakery uses a special flour mixture that contains corn, wheat, and rye in the ratio of 3:5:2. If a bag of the mixture contains 5 pounds of rye, how many pounds of wheat does it contain?

A 2   B 5   C 7.5   D 10   E 12.5

**Hint** Be on the lookout for extra information that is not needed to solve the problem.

**Solution** Read the question carefully. It contains a ratio of three quantities. Notice that the amount of corn is not part of the question. So you can ignore the part of the ratio that involves corn.

The ratio of wheat to rye is 5:2. The amount of rye is 5 pounds. Create a proportion. Let \( x \) represent the amount of wheat. Find the cross products. Solve the equation for \( x \).

\[
\frac{5}{2} = \frac{x}{5} \iff \text{wheat} \quad \text{rye}
\]

\[
5(5) = 2(x)
\]

\[
25 = 2x
\]

\[
\frac{25}{2} = \frac{2x}{2}
\]

\[
12.5 = x
\]

The bag contains 12.5 pounds of wheat. The answer is E.
Chapter 9  Preparing for Standardized Tests

After you work each problem, record your answer on the answer sheet provided or on a sheet of paper.

Multiple Choice

1. On a map, the distance from Springfield to Pleasantville is 6 inches. The map scale is \( \frac{1}{2} \) inch = 20 miles. How many miles is it from Springfield to Pleasantville?
   A 6.67 mi   B 60 mi   C 120 mi   D 240 mi

2. Which ordered pair represents the \( y \)-intercept of line \( MN \)?
   A \((0, -2)\)   B \((-2, 0)\)   C \((0, -4)\)   D \((-4, 0)\)

3. If 2 packages contain a total of 12 doughnuts, how many doughnuts are there in 5 packages?
   A 12   B 24   C 30   D 36   E 60

4. Nathan earns $24,000 per year in salary and 8% commission on his sales. If he needs a total annual income of at least $30,000, how much does he need to sell each year?
   A at least $480   B at least $6000   C at least $26,400   D at least $75,000

5. Point \( B(4, 3) \) is the midpoint of line segment \( AC \). If point \( A \) has coordinates \((0, 1)\), what are the coordinates of point \( C \)?
   A \((-4, -1)\)   B \((4, 1)\)   C \((4, 4)\)   D \((8, 5)\)   E \((8, 9)\)

6. The ratio of girls to boys in a science class is 4 to 3. If the class has a total of 35 students, how many more girls are there than boys?
   A 1   B 5   C 7   D 15   E 20

7. Jessica served cheese, peanut butter, and cucumber sandwiches at a luncheon. She also served iced tea and lemonade. Each guest chose one sandwich and one drink. Of the possible combinations of sandwich and drink, how many included iced tea?
   A 1   B 2   C 3   D 6

8. The average of five numbers is 20. If one of the numbers is 18, then what is the sum of the other four numbers?
   A 2   B 20.5   C 82   D 90   E 100

Grid In

9. An average of 3 out of every 10 students are absent from school because of illness during flu season. If there are normally 600 students attending a school, about how many students can be expected to attend during flu season?

Extended Response

10. The chart shows the average height for males ages 8 to 18.

<table>
<thead>
<tr>
<th>Age (yr)</th>
<th>Height (cm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>8</td>
<td>124</td>
</tr>
<tr>
<td>9</td>
<td>130</td>
</tr>
<tr>
<td>10</td>
<td>135</td>
</tr>
<tr>
<td>11</td>
<td>140</td>
</tr>
<tr>
<td>12</td>
<td>145</td>
</tr>
<tr>
<td>13</td>
<td>152</td>
</tr>
<tr>
<td>14</td>
<td>161</td>
</tr>
<tr>
<td>15</td>
<td>167</td>
</tr>
<tr>
<td>16</td>
<td>172</td>
</tr>
<tr>
<td>17</td>
<td>174</td>
</tr>
<tr>
<td>18</td>
<td>178</td>
</tr>
</tbody>
</table>

Part A  Graph the information on a coordinate plane.
Part B  Describe the relationship between age and height.
